

Running the shop — the admin panels, in plain words, click by click.

Built 2026-10-10 from docs/MERCHANT-GUIDE.md

Running TuneWear — the admin guide

For whoever runs the shop day to day. Every screenshot was taken on the real admin (staging, September 2026; 1.2–1.5, the Add product page, and 7.6 on a demo order, October 2026; the photo guide, 11.7, from the live site). The gold rings and numbers show what to click, in order. Nothing here needs a terminal, code or a deploy: every change reaches the website by itself, most within seconds.

How each section is laid out: *when* you would use it, *what* it does, *who* may use it, then the clicks, with a worked example.

Contents

0. Getting started — the two admins, logging in, the sidebar
 1. Products — adding one, sizes and colours, photos, price, the extras
 2. Categories — the tiles on /men and /women
 3. Prices and sales — the base price, price lists, Publish changes
 4. Discount codes and offers (promotions)
 5. Delivery charges
 6. Stock
 7. Orders — from the website, what to do when one arrives, and DM orders you type in
 8. Customers and password resets
 9. Shop claims — what the site says about the business
 10. Sales channels
 11. The website's words and photos (Payload), and the photo guide — the right size and shape for every photo
 12. Staff and roles
 13. Store settings
 14. Analytics, and the visitor report
 15. Glossary
-

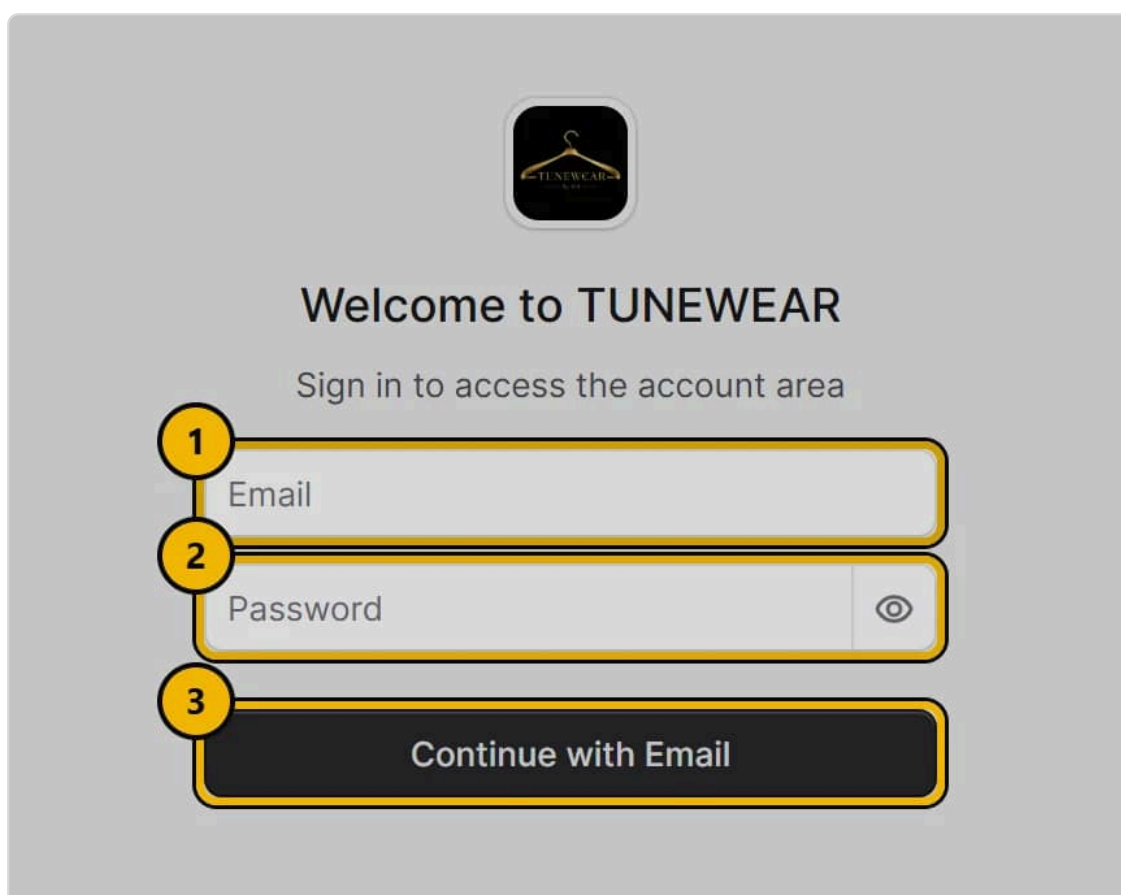

0. Getting started

The two admins

The shop has **two separate admin panels**, each with its own address and login, plus a visitor report (its own login too) you open from the first.

Admin	Address	Holds
Medusa	<code>https://tunewear-admin.<domain>/greenroom</code>	Products, categories, prices, stock, orders, customers, staff
Payload	<code>https://tunewear.<domain>/admin</code>	The words and photos on the pages: home, about, footer, FAQ...
Visitor report	Medusa → Analytics → Open visitor report	Who visited, from where, and what they did — your own login (14.2)

The Medusa address ends in `/greenroom` , not `/app` . `/app` shows a "not found" page.

3

Login

The sidebar

What you see depends on your role (chapter 12). A Staff login, for example, has no Price Lists, Promotions or Analytics. Two useful pages have **no sidebar entry** and are reached by address: **Draft orders** (</greenroom/draft-orders> , chapter 7) and each product's page.

Where each thing is edited

I want to change...	Admin	Go to
A product, its sizes, colours, photos, price, stock	Medusa	Products (chapter 1)
The category tiles on /men and /women	Medusa	Products → Categories (chapter 2)
Sale prices	Medusa	Price Lists , then Publish changes (chapter 3)
Discount codes, free delivery offers	Medusa	Promotions (chapter 4)
Delivery charges (Inside / Outside Dhaka)	Medusa	Settings → Locations & Shipping (chapter 5)
Orders, DM orders	Medusa	Orders , Draft orders (chapter 7)
Home page hero, the Men/Women/Sale cards, section headings	Payload	Pages → Home
The Men or Women page's hero and text	Payload	Pages → Men / Pages → Women
Sale page (masthead, Mix & Match photo, offer strip)	Payload	Pages → Sale
About, Contact, FAQ, and pages you add (Shipping, Returns...)	Payload	Pages → About, Contact, FAQ & more
Footer, the trust strip, the scrolling marquee	Payload	Site content → Footer / Trust Bar / Announcement strip

1. Products

When: a new garment arrives, or one changes (new colour, new photo, new price).
Who: Staff and above can add and edit products. Changing a price is also allowed for Staff; cost price is covered in 1.9.

1.1 The one idea everything depends on: options and variants

A product has **options** — here **Size**, and **Colour** if it comes in more than one. Every combination of option values is a **variant**: the thing a shopper actually buys, with its own stock count.

Example: a T-shirt in Black and White, sizes S, M and L, has $2 \times 3 = 6$ variants: Black / S, Black / M, ... White / L.

Decide the colours when you add the product (1.5). Colours added later do not reach the sizes that already exist, and each size then has to be given its colour by hand (1.6).

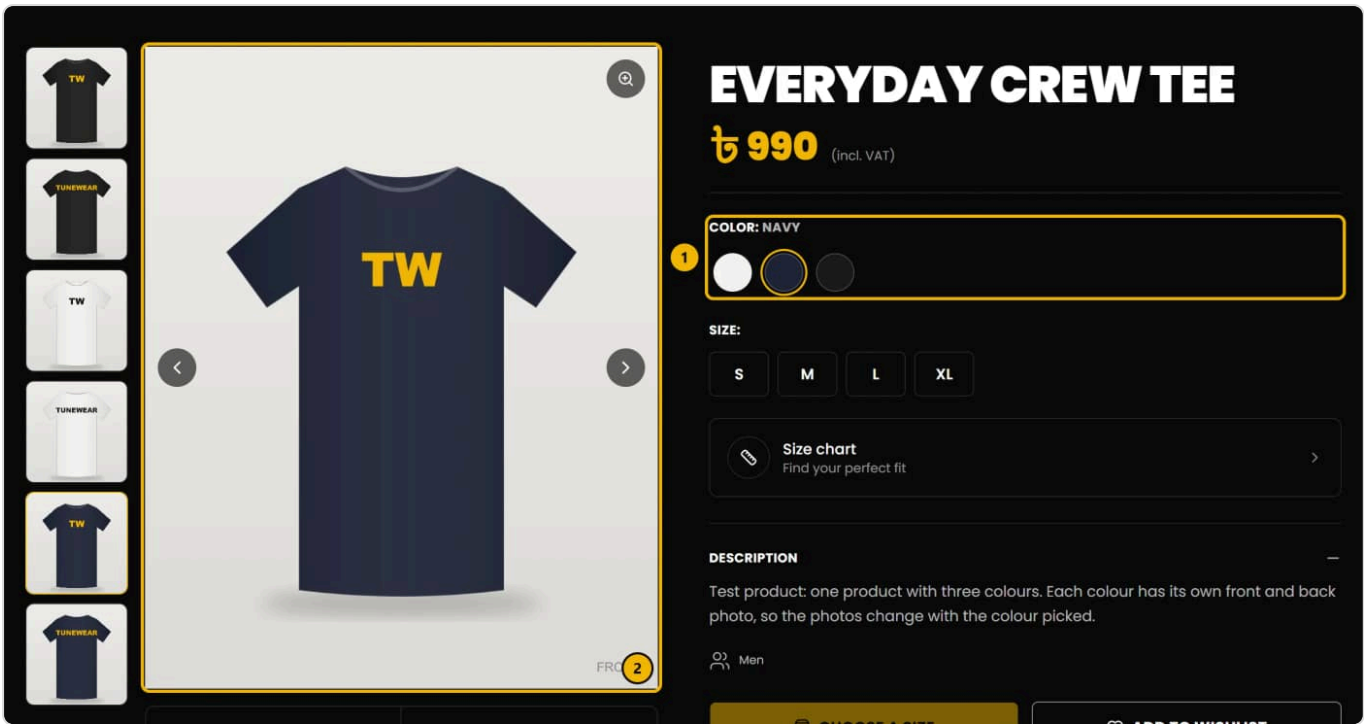

A shop that lists each colour as **its own product** can do that too: name them `Solid Summer T-Shirt - White` , `Solid Summer T-Shirt - Blue` , give each a Colour option with its one colour, and the product page shows the others under **Other colours** by itself (1.12).

The colour dots — there is no switch. The shop decides from how many colours the product's Colour option has:

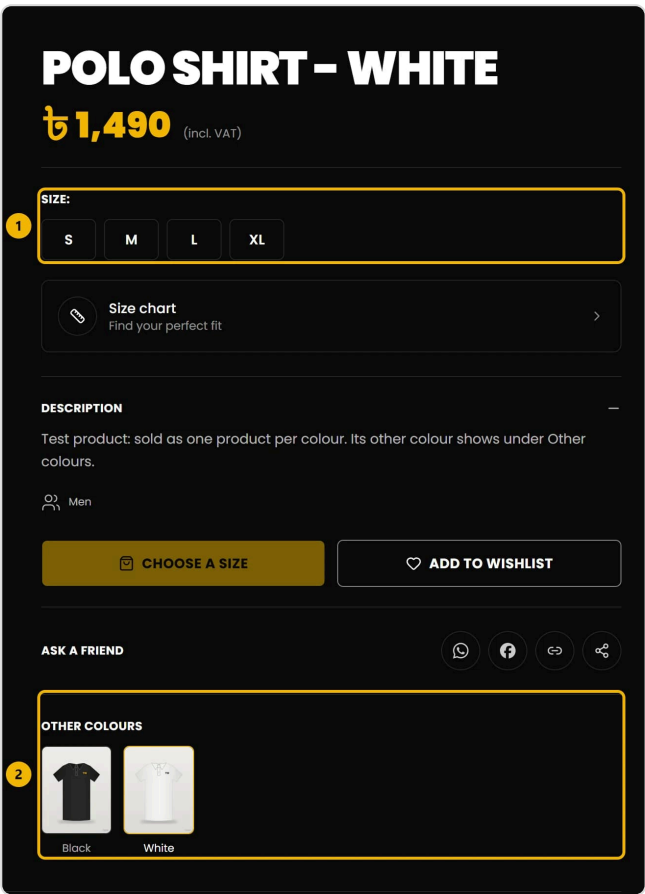

Colours on the product	Card in the shop	Colour filter	Product page
None (only Size)	No dot	Not listed	No colour dots
One (e.g. <code>White</code>)	One dot	Under White	Nothing — the colour is already chosen
Two or more (e.g. Black, White, Navy)	A dot for each	Under each	Colour dots to click; photos follow the colour

To get clickable dots, give the product a second colour. To remove them, leave it one colour.

Two or more colours — **Everyday Crew Tee** in White, Navy and Black: the dots to click (1), and the photos change to the colour picked (2). For that, pick each photo's colour (1.10).

One colour — **Polo Shirt - White** : no colour line at all — there is nothing to choose, so the page picks the colour for the shopper and goes straight to the sizes (1). Its other colour, sold as its own product **Polo Shirt - Black** , is one click away under **Other colours** (2; how, in 1.12).

1.2 Add a product — everything on one page

Sidebar **Products** → **Create**. One page opens, **Add product**, with everything a new garment needs, from top to bottom. Nothing is saved until you press **Publish** or **Save as draft** at the bottom right.

The screenshot shows the TuneWear admin interface. On the left is a sidebar with navigation links: Search, Orders, Products (highlighted with a yellow circle and '1'), Collections, Categories, Options, Inventory, Customers, Promotions, Price Lists, Analytics, Audit log, Size charts, Password resets, Shop claims, and Settings. The main area is titled 'Products' and has a 'Default' tab. It contains a table with columns: Product, Collection Title, Sales Channels, Variants, and Status. The table lists 8 products, all with 'Published' status and 'TuneWear Storefront' as the sales channel. At the bottom right of the table area are buttons for 'Export', 'Import' (with a yellow circle and '2'), and 'Create'. The bottom of the interface shows the user 'admin@tunewear.com'.

Product	Collection Title	Sales Channels	Variants	Status
Cable Knit Turtl...	-	TuneWear Storefront	4	Published
Diamond Cable ...	-	TuneWear Storefront	4	Published
EXS Drip Jacqu...	-	TuneWear Storefront	5	Published
Checkerboard K...	-	TuneWear Storefront	5	Published
Cable Knit Butt...	-	TuneWear Storefront	5	Published
Colour-Block Zi...	-	TuneWear Storefront	5	Published
Rib Knit Midi Dr...	-	TuneWear Storefront	4	Published
Rib Knit Lounge...	-	TuneWear Storefront	4	Published

Details. The garment's **Name** (1), its **Price** (2) and, if you like, a **Description** (3) — fabric, fit, how to wash it. The price is **one price for every size and colour**: type it once. The web address is made from the name by itself; two products may share a name.

The 'Details' form has three main sections. The first section is 'Name' with a text input field containing 'Ribbed Knit Midi Dress' (marked with a yellow circle and '1'). To the right of the input is a 'Price' section with a currency dropdown set to 'BDT' and a text input field containing '2,450' (marked with a yellow circle and '2'). Below the name input is a note: 'One price for every size and colour.' The second section is 'Description (optional)' with a large text area containing the text 'Soft rib knit, relaxed fit, falls below the knee. Hand wash cold.' (marked with a yellow circle and '3').

1.3 Photos, and the colour each one shows

Add photos (1): click, or drag photos onto the box. The box states the photo rule — JPEG or WebP, tall 2 : 3, under 2 MB (more in 1.10). For each photo, pick **the colour it shows** (2); a shopper who picks that colour is taken straight to it. The colour list fills once you add colours further down (1.5); leave **Every colour** for a photo that is not one colour. The **description** (3) is written for you from the name and the colour — read by screen readers and Google Images; change it only if you have a better one. The first photo is the **Cover** — the one on the product's card in the shop. **Make cover** (4) moves a photo to the front.

Photos
The first photo is the cover. Pick the colour each photo shows - a shopper choosing that colour is taken straight to it.

1.4 Where it shows — who it is for, category, tags

Who it is for (1) decides the aisle: **Men** shows the product on /men, **Women** on /women, **Unisex** on both. **Category** (2) puts it in a tile (chapter 2) — and gives the sizes (1.5). **Tags** (3) are optional labels such as **new-arrival** : click one to add it, again to take it off (what each tag does: 1.11). The delivery set-up and the website's sales channels are filled in for you — there is nothing to choose.

1.5 Colours, sizes and stock

Colours. Type a colour and press **Enter** (1); the box empties, ready for the next one. Each colour gets a **swatch** — the dot shoppers tap: click the square to pick the colour (2), or paste its code, such as `#5b5e3a`, into the box beside it (3). A colour with no swatch says so; the shop then guesses one from the name.

Sizes come from the **category's size chart** (4): they are already ticked. Untick any size this garment does not come in (5). A category with no size chart offers S to XXL to tick. **Another size** adds one that is not on the list (e.g. 3XL).

Fill all boxes

2

Colour	S	M	L	XL
Black	40	40	40	40
Olive	40	40	40	6 3

4

286 pieces in stock in total.

Complete the look (optional, 1) — up to two other products shown under this one; search and click (more in 1.12). Then **Save as draft** (2) — not on the website yet — or **Publish** (3), on the website within seconds.

Complete the look
Optional. Up to 2 pieces shown under this product on the shop, each with a quick add-to-bag.

Nothing picked — the section is hidden on the shop.

1 Search a product to add

2 Save as draft 3 Publish

If something is missing, nothing is saved and the bar says what (1); the empty boxes are outlined in red.

Type a colour, then press Enter — e.g. Black Add

1 Still needed: add at least one photo, give the product a name, set a price, choose men, women or unisex, choose a category, add at least one colour, tick at least one size.

Cancel Save as draft Publish

After saving you land on the product's own page, where everything can be changed later (1.6 onwards).

1.6 Adding a colour afterwards

If the product was created with sizes only, add the colour under **Options** (type it, press Enter), then give **each existing size** its colour: in **Variants**, ... → **Edit** → **Colour** → pick → **Save**. A new colour also needs new sizes: **Variants** → **Create**, choose the size and the colour, **Continue**, give it a price, **Save** — then add stock (chapter 6). Sizes, then price, then stock: until all three exist the colour shows on the website crossed out as sold out.

Cost price (₹)

Save

This screenshot shows the same 'Cost price' form but without the annotations. The input field contains '520' and the 'Save' button is visible.

1.10 Photos and colours

The shape of a photo — shoot every product photo tall, at 2 : 3 (for example 1200 × 1800 pixels; 1365 × 2048 is fine too). That one shape is what the shop is built around: the product cards and the small pictures under the main photo show the whole 2 : 3 photo, and the big photo on the product page is a little shorter (4 : 5 on a phone and on a computer, square on a tablet), so it trims a thin strip off the top and bottom. Leave some space above and below the garment so nothing important sits on those edges. Use the same framing for every colour of a product, so the photos look like one set when a shopper switches colours. More on sizes and file types in the photo guide, section 11.7.

Each photo must be under 2 MB, as JPEG or WebP. The upload box says so (1). A bigger photo is refused with its name; drop it into **tinypng.com** (free), download the smaller copy, and add that instead. PNG is only for logos and graphics — a PNG photo is several times bigger.

Media (Optional)

Add media to the product to showcase it in your storefront.

📁 Upload images

1

JPEG or WebP, about 1200 × 1800 px (tall, 2 : 3), under 2 MB each. PNG only for graphics. Drag photos here or click to choose.

❗ These photos are over 2 MB:

big-photo.jpg

Shrink them at tinypng.com (free) and add them again.

Photos added with the product already have their colour (1.3). Photos added later, on the product page: the **Photographs & image SEO** box — for each photo, pick which colour it shows (or **Shows every colour**). A shopper who picks that colour is taken to that photo. The description underneath is read by screen readers and Google Images; it is pre-written for you.

What each tag does on the website:

Tag	What it does
new-arrival	A New label on the product, and the product is listed on the New arrivals page. That page shows only tagged products: take the tag off and the product leaves the page. With none tagged, the page shows an empty shelf.
featured	A Featured label; puts the product on the home page's rail, and first on the shop pages.
bestseller	A Bestseller label.
A tag you made	Shown as a label on the product.

Worked example: a new hoodie arrives — add `new-arrival` and it appears on New arrivals. A month later, remove the tag and it leaves the page; it is still in the shop everywhere else.

A photo card has room for two labels, so it shows the two tags added most recently; the product page shows them all.

1.12 Complete the look, Other colours, You may also like

Three sections under the details on every product page.

- **Complete the look** — up to two pieces **you** choose, when you add the product (1.5) or later on the product's admin page, **Complete the look** box: type a name in the search box, click the product. It saves at once. **Remove** takes one off. With nothing picked, the section does not show.
- **Other colours** — turned on by the product names. Steps just below.
- **You may also like** — automatic. Same category, in stock, best seller first.

Other colours, step by step

This is for a garment you list **as one product per colour**. There is no switch to turn on: **the product names are the switch**.

1. Make each colour its own product (1.2), with its own sizes, stock and photos.
2. Give every one the **same garment name**, then a space, a dash, a space, and the colour:
 - Solid Summer T-Shirt - Blue
 - Solid Summer T-Shirt - White

Any garment works the same way: Polo Shirt - White , Polo Shirt - Black .

3. **Give each one its colour** — one **Colour** option with **one** colour, when you add it (1.5): type **Blue** . This is what puts the product under **Blue** in the shop's colour filter and the blue dot on its card. The product page names it — "Color: Blue" with its dot — but there is nothing to click: switching colour is what the tiles below are for.
4. In **Media**, put the photo you want on the small tile **first**. The tile shows each product's first photo.
5. Publish them. Within seconds every one of their pages shows all the colours, the one being looked at outlined in gold. Click a tile and the shopper is on that colour's page.

Which names join the group:

Title	Joins?
Solid Summer T-Shirt - Green	Yes
solid summer t-shirt - Green	Yes — capital letters do not matter
Solid Summer T-Shirt Green	No — there is no dash
Solid Summer T-Shirt-Green	No — the dash needs a space either side
Solid Summer Tee - Green	No — the garment words are different

- **A new colour** joins by being named the same way. Nothing else to do.
- **To take a product out**, rename it so the garment words differ.
- **Sold out** — the colour stays, faded and crossed out, so shoppers see it exists.
- **Only one product with that name** — the section does not show.
- **Skipped step 3?** The tiles still work, using the colour from the name, but the product is missing from the colour filter.

A garment sold as **one product with several colours** (1.1) shows them as colour dots beside the sizes instead. Use one way or the other for a garment, not both.

1.13 The rest of the product page's boxes

- **What this garment's page claims** — this product's own rating and customer count; empty uses the shop's (chapter 9).

Not showing? In order: it is Draft; every size is out of stock (it shows, but crossed out).

2. Categories

When: a new kind of garment (Hoodies, Jackets) needs its own tile on /men and /women.

Who: Admin and above. Staff can put products into existing categories from the product, but not create or change categories.

The one thing to understand first: you never choose "men" or "women" on the category. A category appears on **/men** as soon as it holds at least one product whose **Type** is **men** or **unisex**, and on **/women** when it holds a **women** or **unisex** product. A category with both shows on both pages. Example: Polos holds one **men** product, so it shows on /men only; Sweaters holds all three types, so it shows on both.

2.1 Create the category

1. Sidebar **Products** → **Categories** → **Create**.
2. **Title** — the name on the tile, e.g. **Hoodies**. Leave **Handle** empty (Medusa makes **hoodies**; it is only the end of the web address — the tile links to **/men/hoodies** and **/women/hoodies**).
3. **Description** — the short line under the name on the tile. **Status** **Active**, **Visibility** **Public** are already chosen.
4. **Continue** → **Organize Ranking**: drag it to its place in the list → **Save**.

The screenshot displays the TuneWear admin interface. On the left sidebar, the 'Categories' menu item is highlighted with a yellow circle and the number 1. The main content area is titled 'Categories' and includes a subtitle: 'Organize products into categories, and manage those categories' ranking and hierarchy.' In the top right corner of this section, the 'Create' button is highlighted with a yellow circle and the number 2. Below the title, there is a search bar and a table listing existing categories.

Name	Handle	Status	Visibility
Sweaters	/sweaters	Active	Public
Cardigans	/cardigans	Active	Public
Polos	/polos	Active	Public
Dresses	/dresses	Active	Public
Co-ord sets	/co-ord-sets	Active	Public

At the bottom of the table, it shows '1 — 5 of 5 results' and '1 of 1 pages' with 'Prev' and 'Next' navigation links.

2.3 The tile photo

Tile photograph box → **Upload photo** (up to 8 MB). Your upload always wins over the photo the site came with. The tile is close to square (a bit taller on phones, a bit wider on computers), so upload a photo about **1200 × 1200** with the person in the middle and their head well below the top edge. There is no focal-point setting here, so what you see in the middle is what stays. See the photo guide, section 11.7.

Tile photograph

Shown on this category's tile on the shop. Not set yet? The tile shows a plain background instead of a photo — never another category's photo standing in for this one.

Not set

2.5 Size charts themselves

Sidebar **Size charts** → **Create**: a title, the unit, the measurement columns (Chest, Length...) and one row per size. A category then uses it (2.4).

The website's Size guide page shows these charts by itself — one card per chart, named after the categories that use it (for example "Sweaters · Cardigans"), with every size. Change a chart here, or give a category a different one, and the Size guide and the product pages change together within seconds. There is nothing to copy into Payload; the words above the charts are edited in Payload → **Size guide** (11.5).

The screenshot displays the TuneWear admin dashboard. On the left is a sidebar with navigation links: Search, Orders, Products, Inventory, Customers, Promotions, Price Lists, Analytics, Audit log, **Size charts** (highlighted with a yellow box and a red '1'), Password resets, and Shop claims. At the bottom of the sidebar are links for Settings and a user profile for 'admin@tunewear.com'. The main content area is titled 'Size charts' with a subtitle 'Write a chart once, then assign it to garments from the product page.' It features a 'New chart' section with a form to create a new chart, including fields for Name, Unit, and a table for measurements (Size, Chest, Length, Shoulder) with an 'Add measurement' button. Below this is an 'Existing charts' section listing four charts: 'Knitwear tops', 'Knit polos', 'Knit dresses', and 'Knit co-ord sets', each with 'Edit' and 'Delete' buttons.

A tile not showing? In order: the category has no products; none of them has Type men / unisex (or women / unisex); they are Draft or not in the TuneWear Storefront channel; the category is Inactive or Internal.

3. Prices and sales

3.1 The base price

What a garment normally costs: the product's **Price** box (1.8). Staff and above.

3.2 Price lists — sales, and special prices

When: a sale ("Eid sale — 20% off the logo tee"), or a special price for a group of customers (wholesale).

Who: Admin and above.

A **price list** holds different prices for some products. While it is active, the shop shows those prices — a sale price shows the normal price struck through beside it, and the gold **-N%** badge on the photo.

Setting	What it means
Type: Sale	A temporary lower price. The shop shows it as a sale (struck-through price, -N%).
Type: Override	A different price with no "sale" look — for a customer group, e.g. wholesale buyers.
Status	Active = in use (within its dates). Draft = switched off.
Start date / Expiry date	Optional. The list switches itself on and off at those times — a scheduled sale.
Customer availability	Optional. Only customers in the chosen customer groups get these prices (they must be logged in).

4. **Save.**

Make the shop show it — Publish changes

Price lists are the one change that does not reach the shop by itself. After creating, editing or ending a price list, press **Publish changes** on the Price Lists page. Worked example: a sale price of ₹990 on the logo tee — before Publish changes the shop still shows ₹1,290; after, it shows ~~₹1,290~~ **₹990 –23%**.

Where a sale shows on the website

Once published, every product in an active **Sale** list:

- shows the sale price, the normal price struck through, and the gold **-N%** badge — on its photo card and on its product page;
- is listed in the **Best deals for you** row on the **Sale** page (and the best-deals row in the home page's sale section);
- is found by the **On sale** tick, the first box in the filter on every shop page — Shop all, Men, Women, each category, New arrivals.

View all beside the Sale page's row opens **Shop all** with **On sale** already ticked: every product on sale, ready to narrow by size, colour or price.

You never pick the Sale page's products by hand — the price lists decide them. With no sale running, the row shows an empty shelf. An **Override** list has no sale look (3.2), so its products are not listed there.

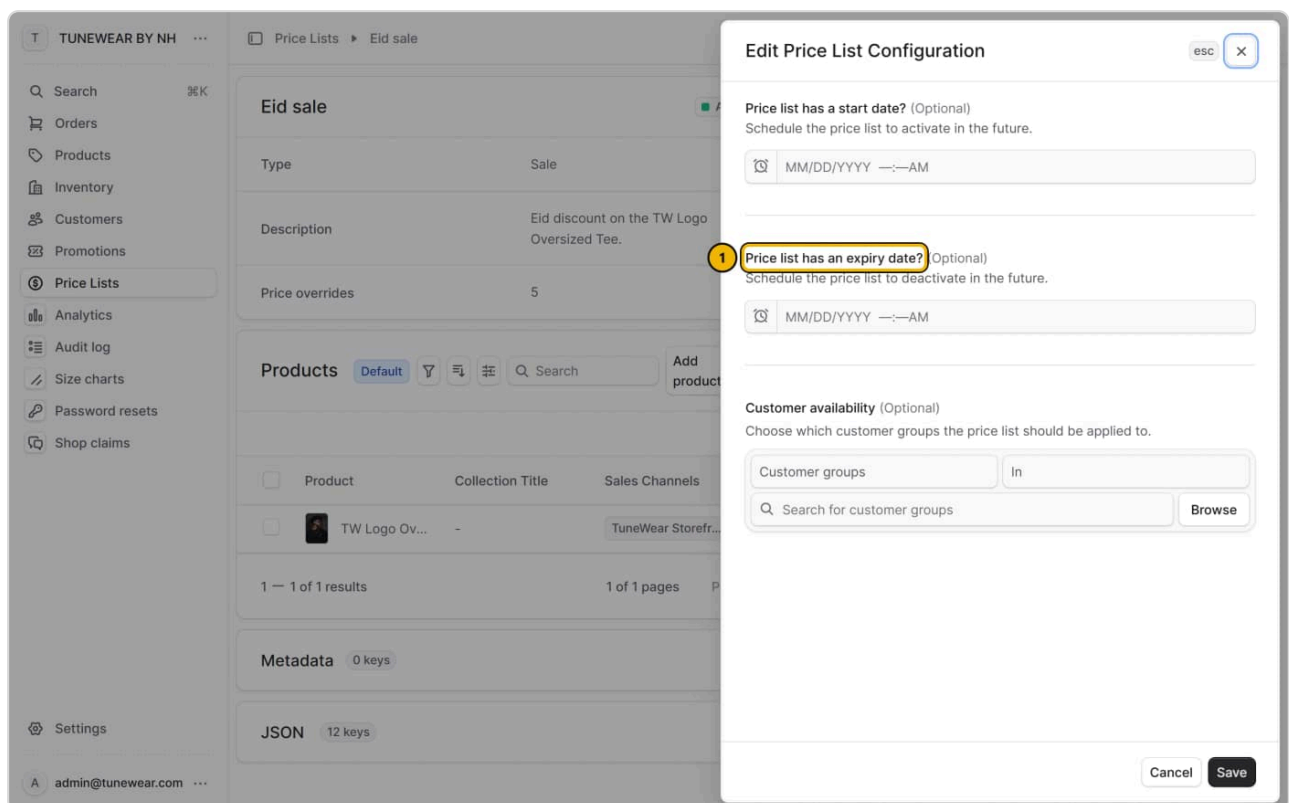

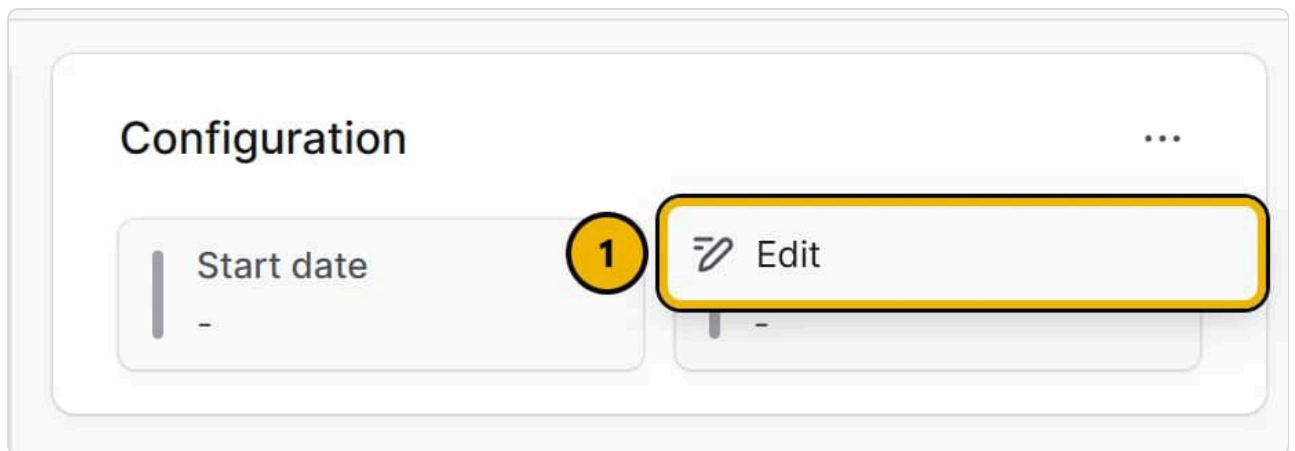

Change, extend, end, or delete a sale

Open the list:

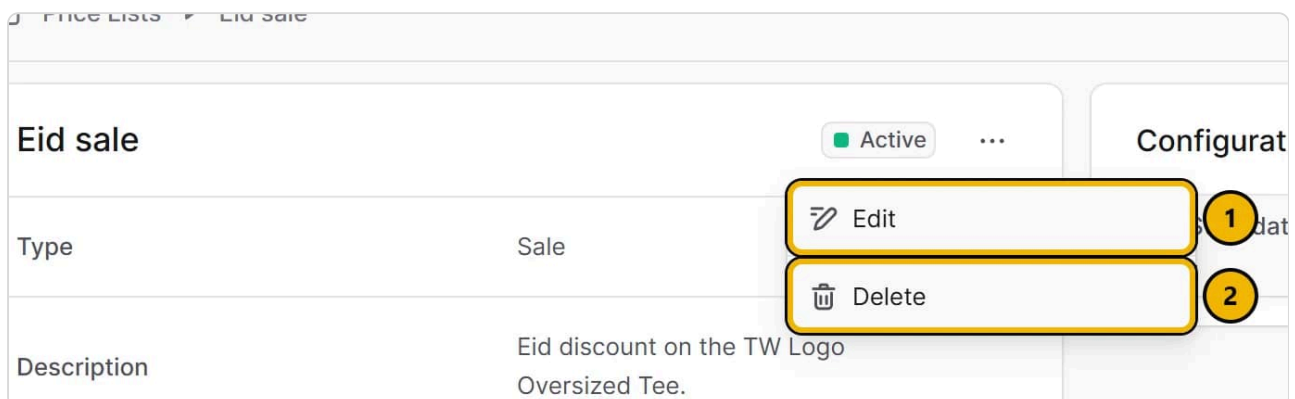

The screenshot shows the TuneWear admin interface for configuring an 'Eid sale'. The sidebar on the left contains navigation links for various sections. The main content area is titled 'Price Lists > Eid sale'. It features a configuration panel with fields for 'Type' (Sale), 'Description' (Eid discount on the TW Logo Oversized Tee), and 'Price overrides' (5). A 'Products' section displays a table with columns for Product, Collection Title, Sales Channels, and Variants. The table shows one product, 'TW Logo Ov...', with 5 variants. Below the table are sections for 'Metadata' (0 keys) and 'JSON' (12 keys). Numbered callouts (1-4) highlight specific UI elements: 1 points to the 'Active' status, 2 points to the 'Add products' button, 3 points to the 'Edit prices' button, and 4 points to the 'Configuration' tab.

- **Edit prices** (3): the same grid — change any price, **Save**.
- **Add products** (2): add more products to the sale.

- **End it now or change its dates: Configuration (4) → ... → Edit** → set the expiry date to now (or move it later to extend) → **Save**.

- **Pause it:** ... (1) → **Edit** → Status **Draft**.
- **Delete it:** ... (1) → **Delete**. Prices go back to normal.

After any of these, press **Publish changes**.

3.3 Which price wins

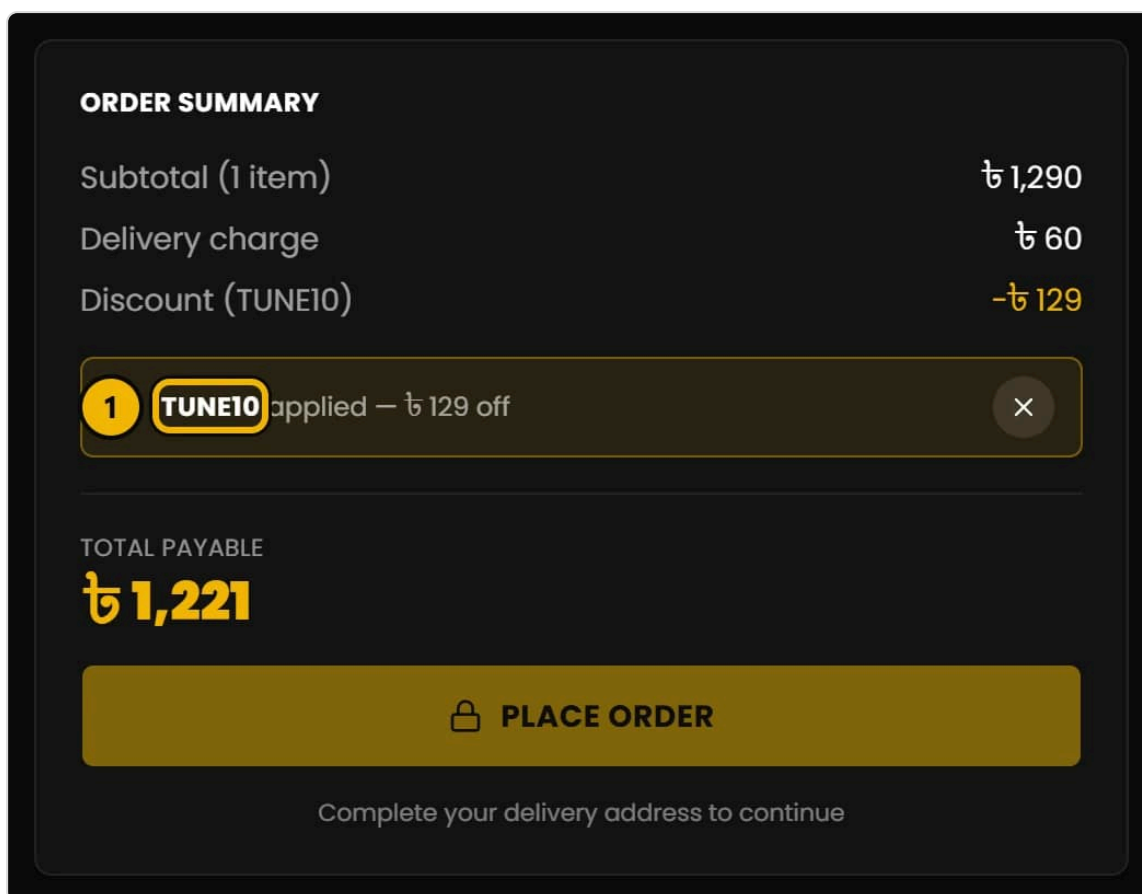

- **Sale:** the shopper pays the lower of the normal price and the sale price. A sale can never make something dearer.
 - **Override:** for the customers it covers, it simply replaces the normal price — even if it is higher. Use it deliberately (a wholesale price).
 - Two sales on the same product: the lower one wins.
-

4. Discount codes and offers (promotions)

When: a code you hand out (" EID20 for 20% off"), or an offer that applies by itself ("free delivery", "buy 2 get 1").

Who: Admin and above.

Shoppers type codes in the **Discount code** box in the checkout summary. One code per order: a second code replaces the first. The discount shows as its own line at checkout, on the confirmation page and on the customer's order page.

The screenshot shows a checkout summary with a dark background. At the top, it says "ORDER SUMMARY". Below this, there is a table-like structure with three rows: "Subtotal (1 item)" with a value of "₹ 1,290", "Delivery charge" with a value of "₹ 60", and "Discount (TUNE10)" with a value of "-₹ 129". Below the discount row, there is a box showing "1 TUNE10 applied — ₹ 129 off" with a close button (X). Below this box, it says "TOTAL PAYABLE" followed by a large "₹ 1,221". At the bottom, there is a large orange button with a lock icon and the text "PLACE ORDER". Below the button, it says "Complete your delivery address to continue".

ORDER SUMMARY	
Subtotal (1 item)	₹ 1,290
Delivery charge	₹ 60
Discount (TUNE10)	-₹ 129

1

TUNE10 applied — ₹ 129 off

X

TOTAL PAYABLE

₹ 1,221

 **PLACE ORDER**

Complete your delivery address to continue

If a code is refused, the box says why: **"That code isn't valid"** (no such code, or it is switched off), **"This code can't be used on this bag"** (its conditions are not met), or **"Choose your district first"** (a free-delivery code, before a district is chosen).

4.1 The six kinds

Sidebar **Promotions** → **Create** → choose the kind → **Continue**.

Kind	Example
Amount off products	€200 off the logo tee
Amount off order	€300 off any order
Percentage off product	20% off everything in Sweaters
Percentage off order	10% off the whole order (TUNE10)
Buy X Get Y	Buy 2 T-shirts, get 1 free
Free shipping	Free delivery (FREESHIP), for everyone or a group

4.2 The settings every kind shares

Method

1
Promotion code
Customers must enter this code at checkout

2
Automatic
Customers will see this promotion at checkout

Status

Draft
Customers will not be able to use the code yet

3
Active
Customers will be able to use the code

Code

- **Method — Promotion code** (1): shoppers must type the code. **Automatic** (2): applies by itself to every bag that qualifies — no code.
- **Status — Active** (3) to use it now; **Draft** keeps it switched off.
- **Code** — what shoppers type, e.g. EID20 (capitals; shoppers can type it in any case).
- **Who can use this code?** — leave empty for everyone, or **Add condition** → **Customer group** to limit it (e.g. VIP customers).
- **Usage Limit** — how many times it can be used across all orders, e.g. 100 for "first 100 orders". Empty = unlimited.

4.3 Value, and which items

Who can use this code?

Which customer is allowed to use the promotion code? Promotion code can be used by all customers if left untouched.

Add condition

- **Promotion Value** (1) — the percentage or the amount.
- **Maximum Quantity** — how many pieces in one bag get the discount.
- **Allocation** (2) — **Each**: every matching piece is discounted; **Once**: only up to the maximum quantity.
- **What items will the promotion be applied to?** — **Add condition** → **Select Attribute** (1) → Product, Category, Type or Tag → the values. "20% off Sweaters" = Category **In** Sweaters.

What items will the promotion be applied to?

The promotion will be applied to items that match the following conditions.

1

Select Attribute

Select Operator

Select Values

×

Add condition

Clear all

Usage Limit

4.4 Amount off — pick Taka

For **Amount off order**, the **Currency Code** (1) condition starts empty and the amount box shows **USD \$**. Choose **BDT** in the currency condition, then type the amount in Taka (2). Without BDT the code does nothing on a Taka order.

Who can use this code?

Which customer is allowed to use the promotion code? Promotion code can be used by all customers if left untouched.

Required

1

Currency Code

Equals

Select Value

Add condition

4.5 Buy X Get Y

"What needs to be in the cart to unlock the promotion?" — the minimum quantity and the product(s) that must be bought. "What items will the promotion be applied to?" — the free (or discounted) piece(s).

What needs to be in the cart to unlock the promotion?

If these conditions match, we enable the promotion on the target items.

Required

Minimum quantity of items

Equals

AND

Required

Product

Equals

Select Value

4.6 Free delivery

Choose **Free shipping**. Leave "What shipping methods..." empty for every delivery, or limit it to one delivery type (e.g. Inside Dhaka). Make it **Automatic** for "free delivery for everyone this week", or give it a code. The shopper sees the delivery charge and then a Discount line taking it off, as soon as they pick their district.

Not possible here: "free delivery over £3,000". Medusa's conditions are customer group, region, country, sales channel and currency — there is no minimum order amount. A minimum-spend offer needs a developer.

Who can use this code?

Which customer is allowed to use the promotion code? Promotion code can be used by all customers if left untouched.

Add condition

What shipping methods will the promotion be applied to?

The promotion will be applied to shipping methods that match the following conditions.

Add condition

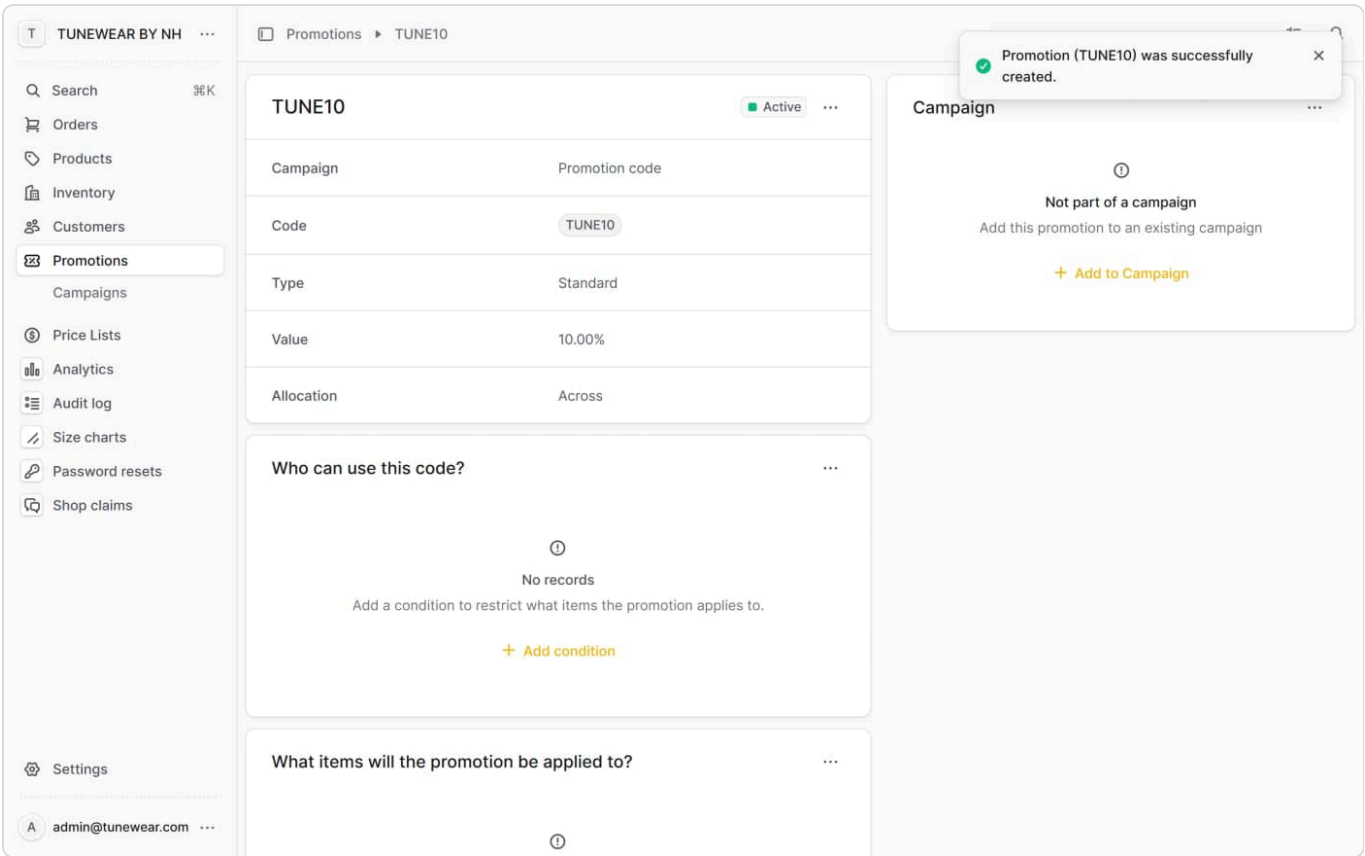

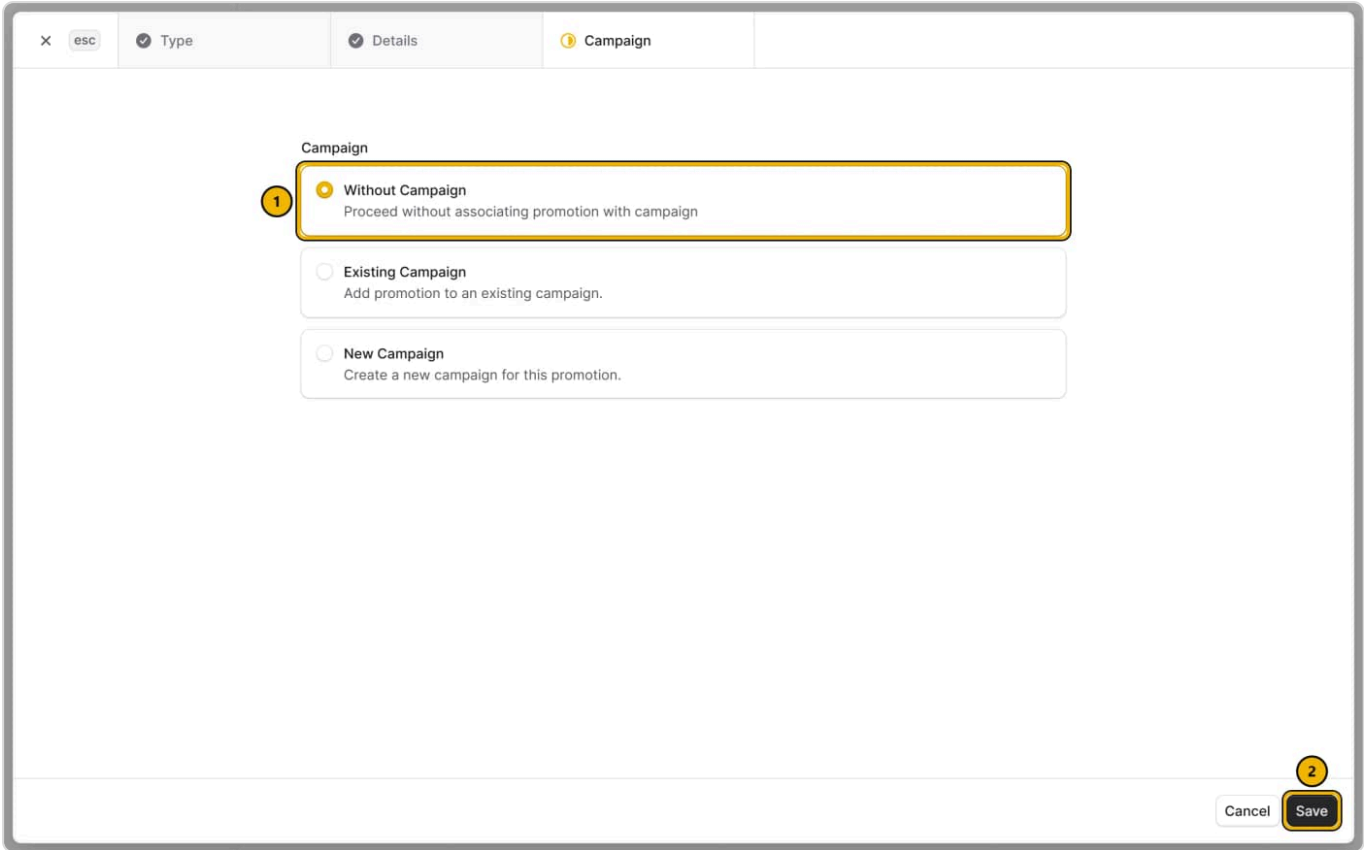

1 Usage Limit

100

Maximum number of times this promotion can be used across all orders. Leave empty for unlimited usage.

4.7 Dates and budgets — campaigns

The last step, **Campaign**, groups promotions with a **start and end date** and a **budget** (a total number of uses, or a total amount of discount). When the end date passes or the budget runs out, the promotion stops by itself. Choose **Without campaign** for an open-ended code.

Promotion Details Percentage off order

Method

☒ **Promotion code**
Customers must enter this code at checkout

☐ **Automatic**
Customers will see this promotion at checkout

Status

☐ **Draft**
Customers will not be able to use the code yet

☒ **Active**

5. Delivery charges

When: the courier's rate changes, or you want a different charge inside or outside Dhaka.

Who: Admin and above.

Checkout charges by district:

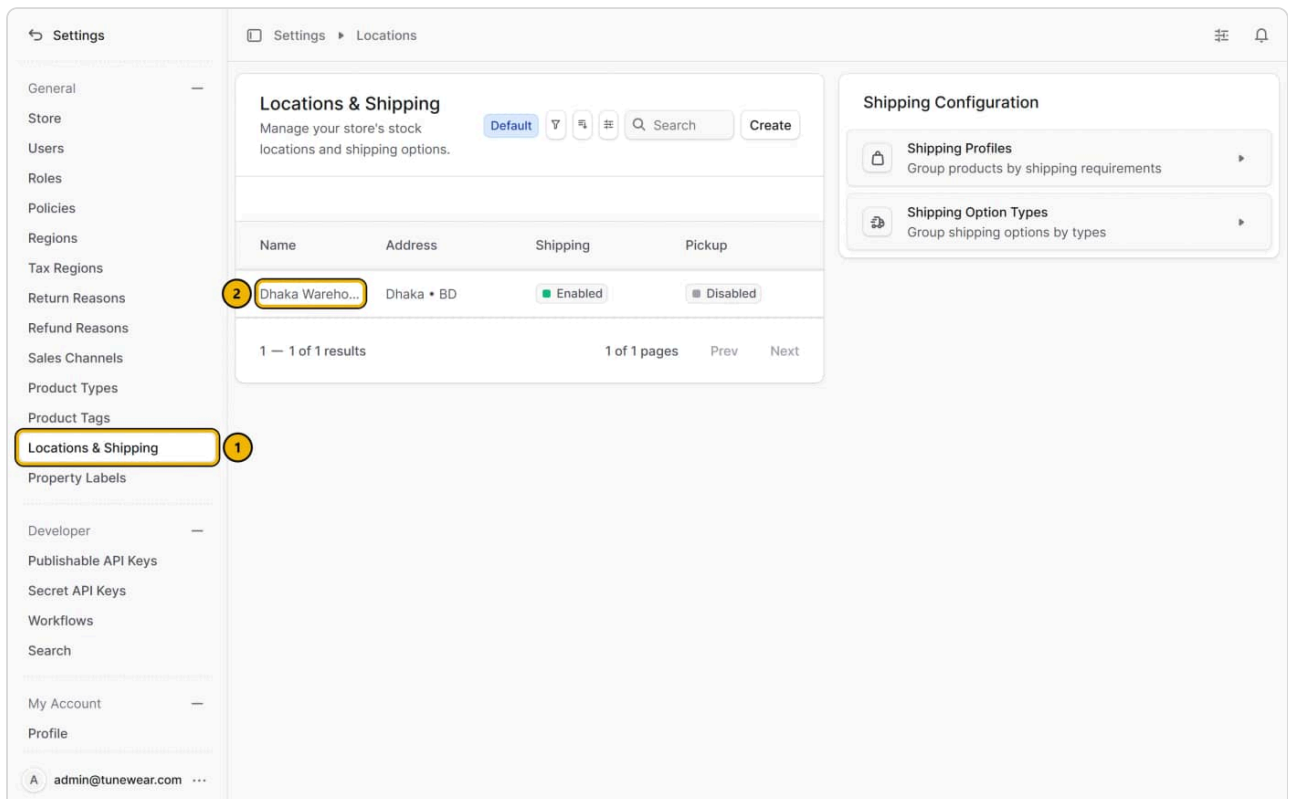

Delivery	For	Staging price
Inside Dhaka	the Dhaka district only	₳60
Outside Dhaka	every other district	₳160

The shopper sees the charge the moment they pick their district, and the order is charged exactly that. Change a price here and checkout shows the new one straight away — no code, no deploy. The website's **Shipping** page lists the same deliveries and prices, read from here, so it changes too within a few seconds; there is nothing to edit in Payload.

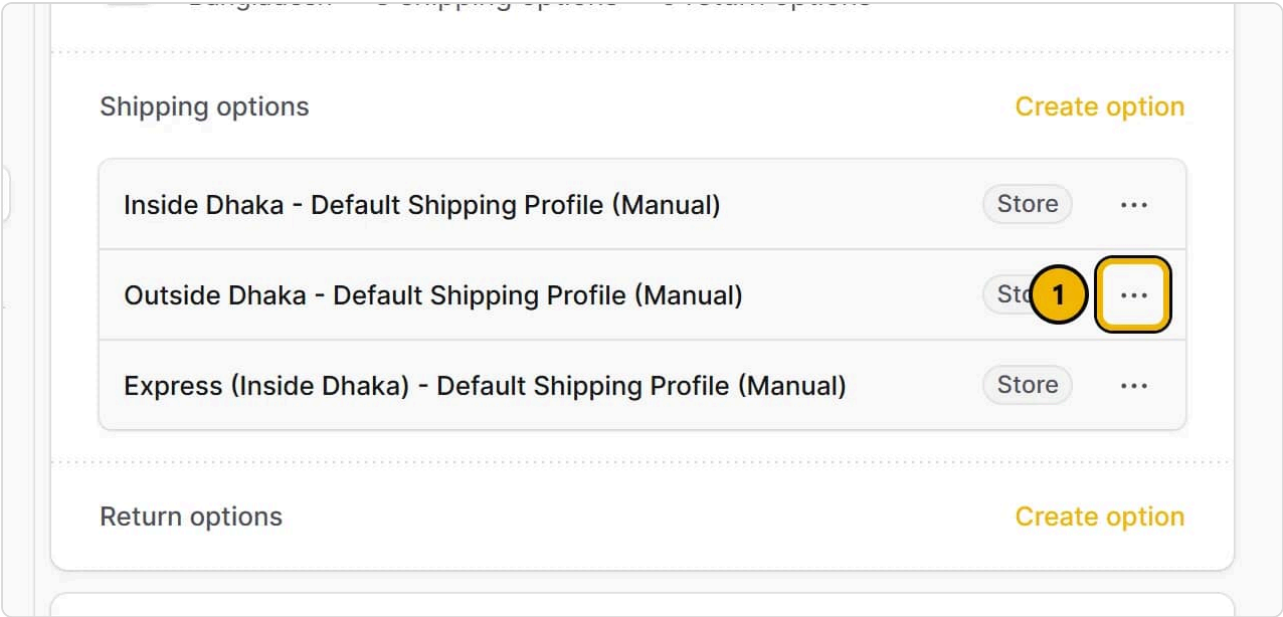

Only change prices — never add or delete a delivery. Checkout picks the delivery by a hidden setting, not by its name, so a second delivery can be charged instead of the real one: a leftover "Test" delivery charged ₳180 instead of ₳60. To try a new price, change the real delivery (5.1).

5.1 Change a delivery charge

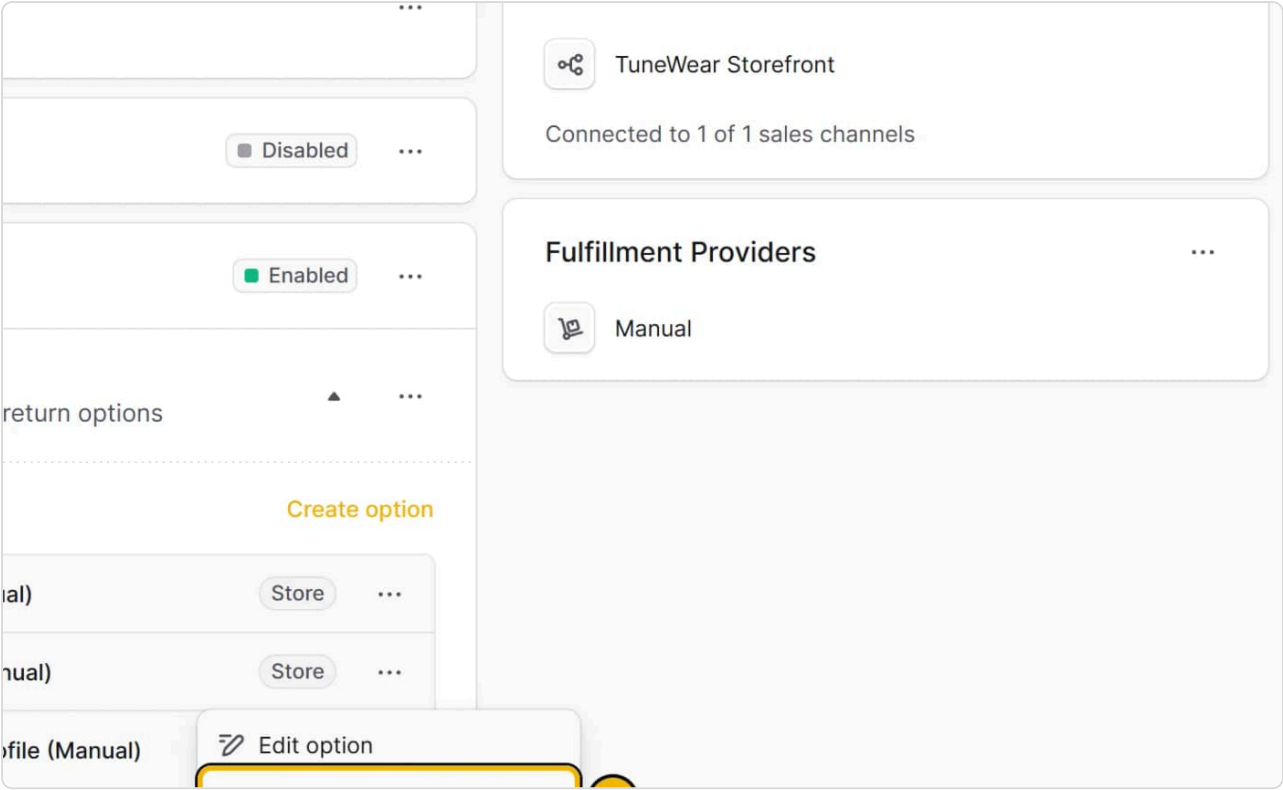

1. **Settings** (bottom of the sidebar) → **Locations & Shipping** (1) → **Dhaka Warehouse** (2).

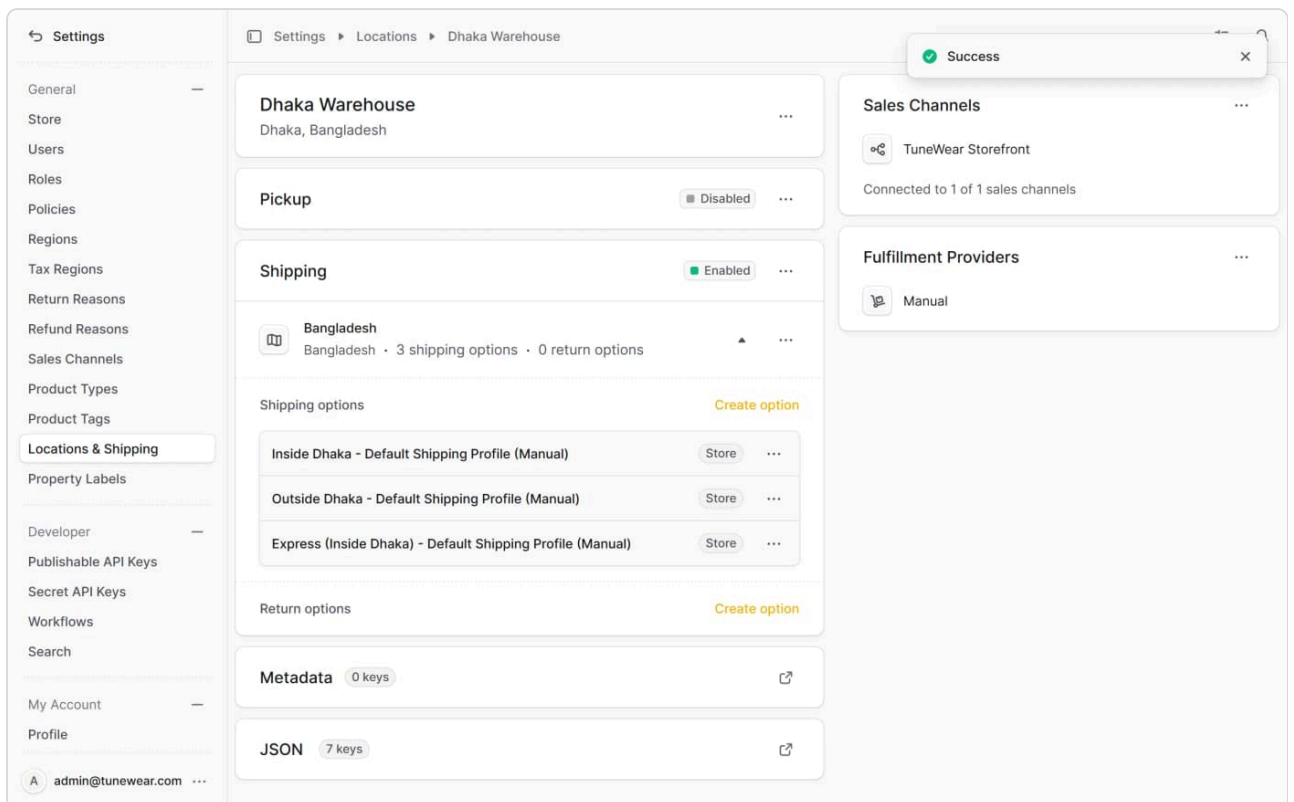

2. Under **Shipping options**, the ... (1) beside the delivery to change.

3. **Edit prices** (1).

4. Click the price (1), type the new amount, **Save** (2).

Free delivery is a promotion (4.6), not a ₹0 price here — a ₹0 price would make delivery free for everyone, always.

5.2 Shipping profiles — you do not need one

Inside and outside Dhaka are **not** shipping profiles; they are the deliveries above. Every product uses the one **Default Shipping Profile**, and every delivery belongs to it. Do not create another profile: a product moved to a profile with no delivery cannot be ordered at all — checkout has nothing to charge it.

5.3 A delivery is missing

If **Inside Dhaka** or **Outside Dhaka** is no longer in the list, do not create a new one — tell your developer. A new delivery needs a hidden setting the admin cannot show clearly, and a wrong one charges the wrong price at checkout.

6. Stock

When: new stock arrives, a count is wrong, a size sells out.

Who: Staff and above.

6.1 Three numbers: in stock, reserved, available

Number	Means
In stock	Pieces on the shelf (Medusa calls it Stocked quantity).
Reserved	Pieces promised to orders that are placed but not yet fulfilled (packed).
Available	In stock minus reserved — what the website can still sell.

The website sells only what is **available**. Worked example from the staging shop: Cable Knit Turtleneck, size S — in stock 20, reserved 3 (three orders not packed yet), available 17. Size M shows 19 in stock because one order was already fulfilled (6.3).

Inventory		Default		Export		Create

6.2 Changing a count

From the product: **Variants** → the size's ... → **Edit stock** → type the new count → **Save**. (From the **Inventory** page the same box opens from each row.)

Variants

Filter

Sort

Search

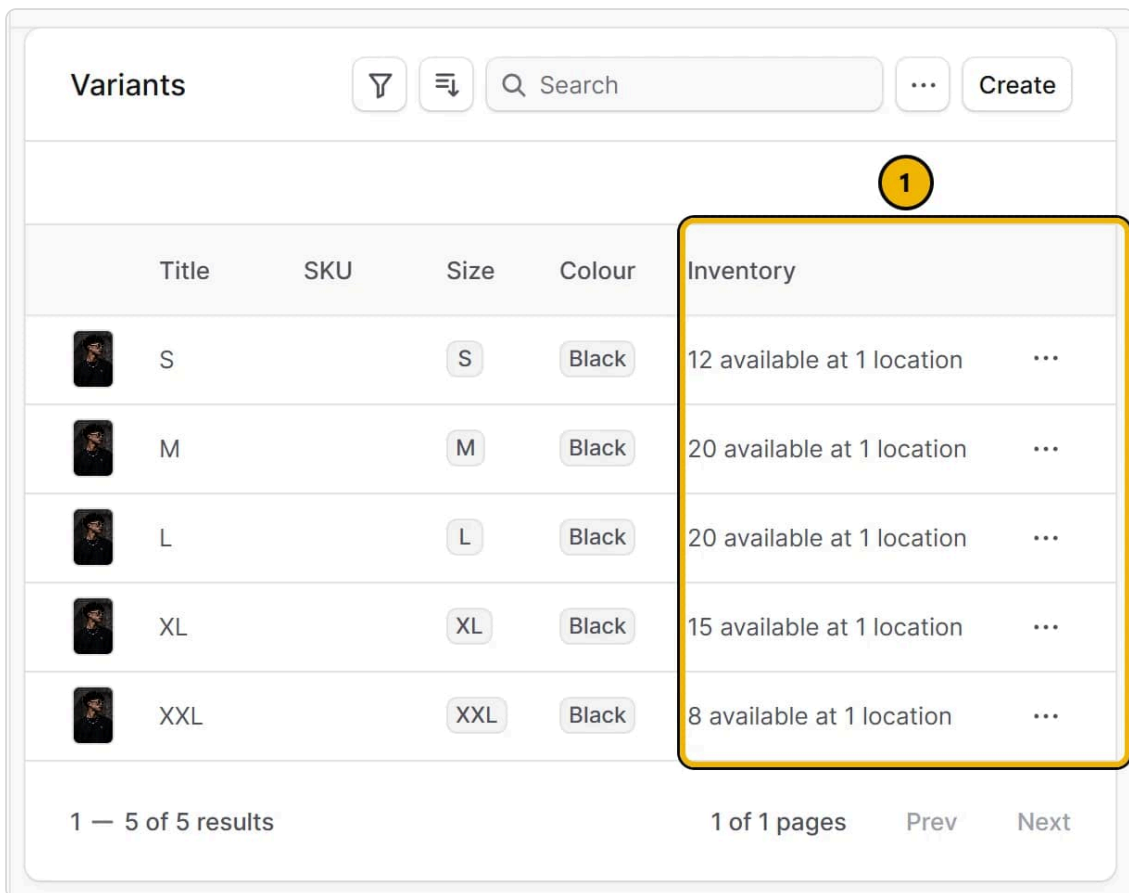

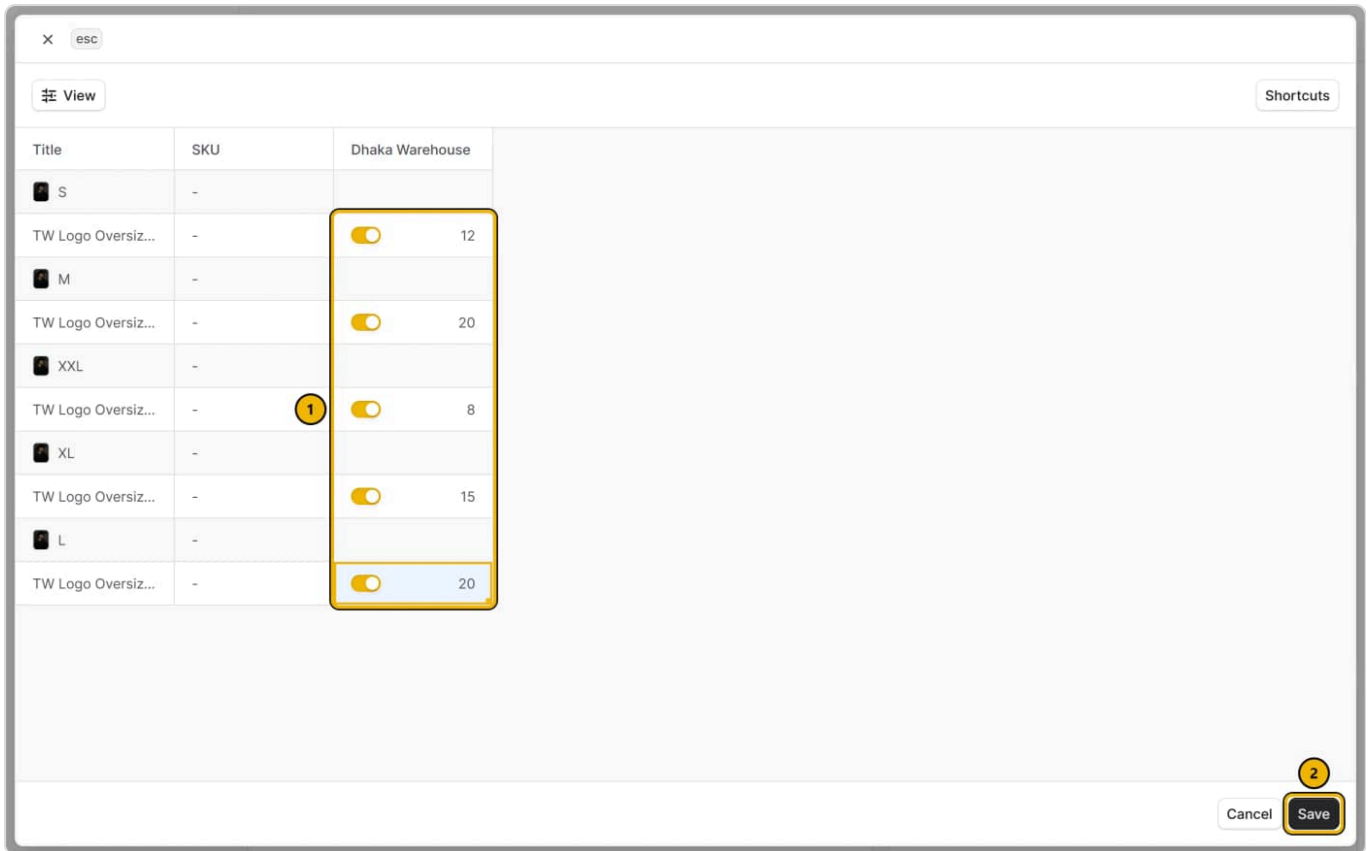

...

Create

Edit prices

Edit stock levels

Title	SKU	Size	Colour	Inventory
S		S	Black	0 available at 1 location
M		M	Black	0 available at 1 location

Type the number **on the shelf** — do not subtract reserved pieces yourself; Medusa does that.

6.3 When stock really goes down

1. **Order placed** → the pieces are **reserved**. In stock stays the same; available drops at once, so nobody else can buy the last one.
 2. **Order fulfilled** (packed, chapter 7) → in stock goes down and the reservation disappears. Available does not change again.
 3. **Order cancelled before fulfilling** → the reservation is released and the piece is available again.
-

7. Orders

Who: Staff and above — except **Capture payment** and **Refund**, which need Admin (7.6).

7.1 What the shopper sees

At checkout the shopper picks **Cash on Delivery** or **Online Payment** (card, bKash, Nagad through SSLCommerz):

The screenshot displays the TuneWear checkout interface. At the top, a navigation bar includes the TuneWear logo and a 'Secure Checkout' indicator. Below this, a progress bar shows four steps: CART, ADDRESS, PAYMENT, and CONFIRM. The main content area is divided into three sections. The left section, titled 'YOUR ORDER (1 ITEM)', shows a 'TW Logo Oversized Tee' in black, size L, with a price of ₳ 990. The middle section, 'DELIVERY ADDRESS', contains form fields for full name (Rahim Uddin), email address (rahim.demo@example.com), phone number (01712345678), and two address lines (House 12, Road 5 and Near Dhanmondi Lake). It also includes fields for city/district (Dhaka) and area/thana/upazila (Dhanmondi), along with a postal code (1213). A checkbox for 'Save this address for next time' is at the bottom. The right section, 'PAYMENT METHOD', offers 'Cash on Delivery' (selected) and 'Online Payment' (via SSLCommerz). Below this, the 'ORDER SUMMARY' shows a subtotal of ₳ 990, a delivery charge of ₳ 80, and a total payable of ₳ 1,070. A large yellow 'PLACE ORDER' button is prominently displayed. At the bottom, a row of icons highlights key features: 100% Original, Easy Returns, Fast Delivery, and Secure Payment.

After placing an order the shopper gets this page, with an order reference like **TW-Q2NG7A**. That is what they will quote on WhatsApp.

7.2 Finding an order

Sidebar **Orders**. Paste the shopper's TW-... reference — or their phone number — into the search box to find it. The list shows each order's customer by **name** and their **Phone**.

To show or hide columns, press the **sliders** button above the list: **Search columns** at the top of that menu finds one by name.

7.3 From placed to done — the four steps

Step	What it means	What happens to stock and money
Fulfill	You picked and packed the items — "ready for the courier".	Stock goes down for real (6.3).
Mark as shipped	Handed to the courier. Say which courier, and its link.	—
Mark as delivered	The customer has it.	—
Capture payment	For Cash on Delivery: the rider handed over the cash.	The order counts as paid.

Fulfill — order page → ... → **Fulfill items**. The number beside each item is **how many of it go in this package** (not stock) — send part of an order now and the rest later if one piece is late. It also shows which location the stock leaves from.

Tracking	-

Mark as delivered

Mark as shipped

Mark as shipped → the two boxes are already open:

- **Courier provider** — pick the courier from the list (Pathao, Steadfast, RedX...). Not there? Pick **Other courier** and type its name in the box that appears.
- **Tracking URL** — paste the parcel's tracking link from the courier's app or website (it starts `https://`).

Save. On the order page the courier's name then appears under **Tracking**, as a link to that parcel. Leave both boxes empty and the order is still marked shipped, just without a courier.

Capture payment — for Cash on Delivery, once the cash is in. Online payments (SSLCommerz: card, bKash, Nagad) are captured already.

Printing an invoice. On any order, at the top of the **Summary** box, beside the ... menu, there are two buttons:

Button	For
Print invoice (A4)	A normal printer. One A4 page (more for a very long order).
Print receipt (80 mm)	A small receipt printer (80 mm paper roll). A narrow paper strip.

Each opens the invoice in a new tab; press **Print** there (or **Ctrl+P**). Use the button that matches your printer — an A4 invoice sent to a receipt printer comes out tiny.

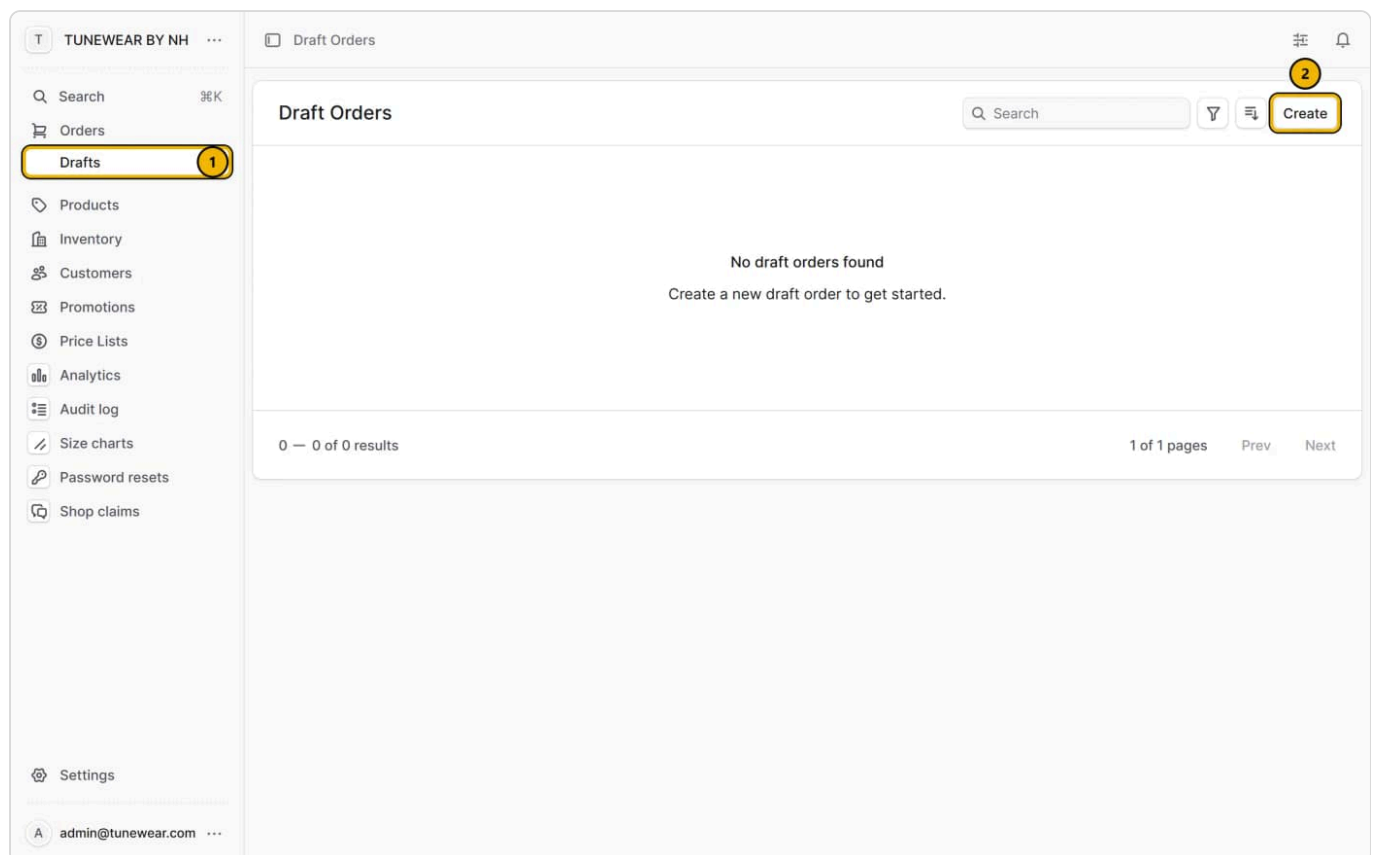

The invoice shows the shop's phone, email and address exactly as they are on the website's **Contact** page — change them there (11.4) and every invoice follows. Its number is the order reference the customer saw (**TW-...**). It always shows the order as it is now, so print again after a change. There are no pictures on it, on purpose.

Under each item, the order page now says which size (and colour) was ordered — **Size: S** — rather than a bare "S".

7.4 DM orders — Draft orders

When: someone orders on Instagram, Facebook or WhatsApp. Type the order in so stock, sales and Analytics include it.

Draft orders have **no sidebar entry**: go to <https://tunewear-admin.<domain>/greenroom/draft-orders>.

1. **Create** → the customer (search, or new: name, email, phone) and the address. **Postal code is optional**
— Bangladeshi addresses go by thana.

7.5 Orders in a customer's account

An order placed while the customer is **logged in** appears in their account (/account and /account/orders). An order placed **as a guest** stays a guest order — it does not move into an account later, even with the same email. At checkout a logged-in customer's email is locked to their account's.

7.6 When a new order arrives — what to do, in order

When: every new order, from the first look to a refund if it comes back. The pictures follow one demo order (#20) the whole way through.

Who: Staff and above for 7.6.1–7.6.6. **Capture payment** (7.6.4) and **Refund** (7.6.7) need **Admin** — a Staff login does not have permission for either. Ask an Admin, or your developer if Staff should be allowed.

Step	What	Every order?
7.6.1	Open the newest order	Yes
7.6.2	See how it was paid	Yes
7.6.3	Call first: fake order check	Yes
7.6.4	Pack, ship, deliver, take payment	Yes
7.6.5	Cancel	Only if it is not going
7.6.6	A customer sends something back	Only for a return
7.6.7	Give the money back	Only for a refund
7.6.8	The reason lists	Rarely

7.6.1 Open the newest order

The shop does not email or text you about new orders yet. Open **Orders** at least every morning and evening.

1. Sidebar **Orders** (1).
2. The list checks for new orders every 2 minutes while it is open, and again whenever you come back to it. **Refresh** (2) checks straight away.
3. The newest order is always at the top (3). Click anywhere on its row to open it.

The screenshot shows the TuneWear admin interface. On the left sidebar, the 'Orders' menu item is highlighted with a yellow box and labeled with a circled '1'. The main content area displays a message: 'New orders appear here on their own' with a sub-note 'This page checks every 2 minutes while it is open. Last checked 5:02 PM.' A 'Refresh' button is circled with a yellow box and labeled with a circled '2'. Below this is a table titled 'Orders' with a 'Default' filter. The table has columns: Order, Date, Customer, Phone, Payment, Fulfillment, and Total. The top row (Order #21) is circled with a yellow box and labeled with a circled '3'. The table data is as follows:

Order	Date	Customer	Phone	Payment	Fulfillment	Total
#21	Oct 10, 2026	Demo Customer	01700000001	Authorized	Not fulfilled	₹ 2,210.00 BDT
#20	Oct 10, 2026	Demo Customer	01700000001	Authorized	Not fulfilled	₹ 3,900.00 BDT

7.6.2 See how it was paid

On the order page, scroll to the **Payments** box and read the label at its top right (1):

Payments

1 Authorized

#WF5WKXZ

10 Oct, 2026, 16:58:52

Pp_system_default

Pending

₹3,900.00

...

↳ Payment #WF5WKXZ is ready to be captured.

Capture payment

Total paid by customer

₹ 0.00 BDT

Total pending

₹ 3,900.00 BDT

Label shows	Means
Authorized	Cash on Delivery. Nothing paid yet — the rider collects it.
Captured	Paid: online (card, bKash, Nagad), or COD after you captured it (7.6.4).
Partially refunded	Some of the money was given back (7.6.7).
Canceled	The order was cancelled (7.6.5).

An online order only appears here **after** SSLCommerz has confirmed the money, so an online order you can see is a paid one.

7.6.3 Call the customer first: the fraud / fake order check

Every order gets a phone call before it is packed. A fake order is one nobody meant to receive: a made-up address, a prank, or someone who will refuse the parcel at the door. Each one costs two courier trips and keeps the pieces off sale. The shop helps you spot them. It never cancels anything by itself: you decide.

On the **Orders list**, the **Fraud / fake order check** column shows each order's state:

Shows	Means
Suspicious	Not called yet, and something looks wrong. Call carefully.
Unverified	Not called yet. Nothing looks wrong.
No answer	Someone called and nobody answered. Call again.
Verified	The customer confirmed on the phone. Safe to pack.
Paid online	Already paid online. A call is up to you.
—	An older order, from before this check existed.

On the **order page**, the **Fraud / fake order check** box (right-hand side) shows:

- **Why it looks suspicious**, in plain words. For example: "This number had 2 orders cancelled or returned before (#21, #20)", "Another order from this number within a day (#24)", or "The address looks incomplete".
- **This number at TuneWear**: how many earlier orders were delivered, cancelled or returned. Click an order number to open it.

What to do:

1. In the **Customer** box, the second line under **Contact** is the phone number (1). The copy button beside it copies it.
2. Ring it and confirm the **size**, the **address**, and that they still want it. If the box says **Suspicious** and you are not sure, ask for the delivery charge by bKash before you send it.
3. Record what happened in the **Fraud / fake order check** box:
 - They said yes: click **Customer confirmed**. The order shows **Verified**.
 - Nobody answered: click **No answer**, and try again later. The box counts the tries.
 - Clicked by mistake: **Undo** puts it back.
4. Pack only **Verified** orders. If the order is fake, cancel it (7.6.5) so the pieces go back on sale. The next order from that number will then show **Suspicious**.

Customer		...
ID	D Demo Customer	
Contact	guide.demo@example.com	Copy
	1 01700000001	Copy
Shipping address	Demo Customer House 12, Road 5, Dhanmondi Dhaka Dhaka Bangladesh	
Billing address	Same as shipping address	

7.6.4 Pack, ship, deliver, take payment

These four steps are in 7.3, with a picture for every click:

1. **Fulfill** — **Unfulfilled Items** box → ... → **Fulfill items** → check the numbers → confirm. Stock goes down now.
2. **Mark as shipped** — pick the courier, paste its tracking link → **Save**.
3. **Mark as delivered** — when the courier says it arrived → confirm.
4. **Capture payment** (Cash on Delivery only, **Admin**) — once the courier hands you the cash: **Payments** box → **Capture payment** → **Continue**. Online orders were captured already; skip this.

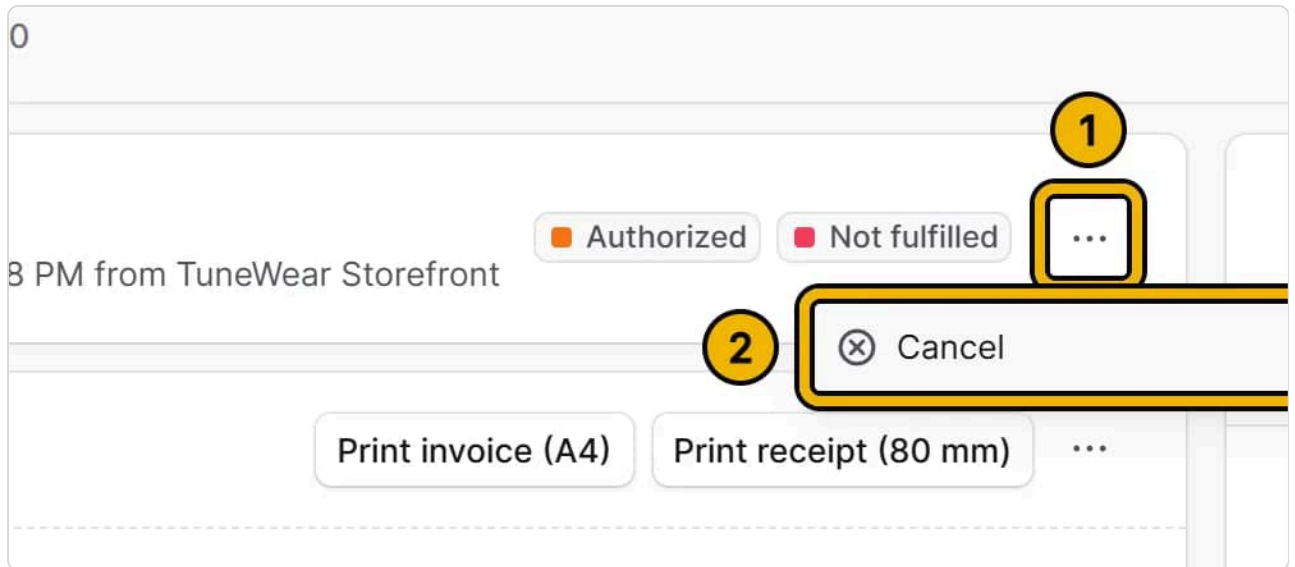

When all four are done the order shows **Captured** and **Delivered**.

7.6.5 Cancel an order

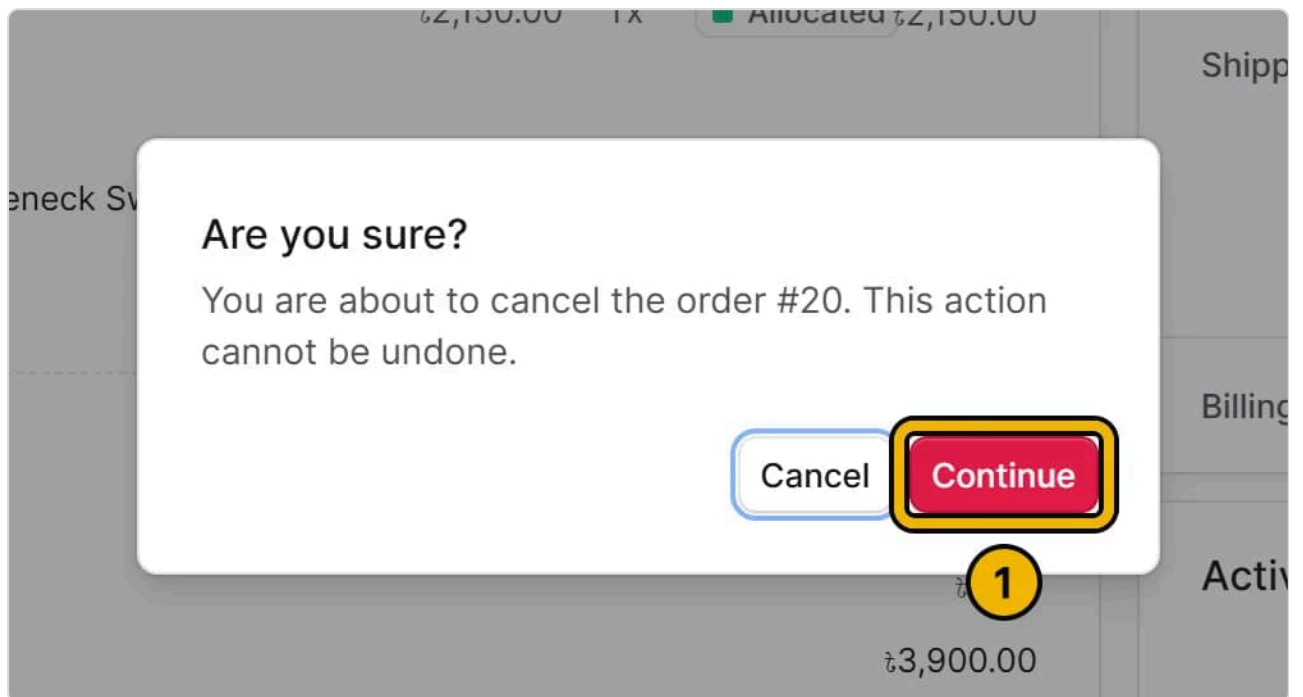

When: the customer changed their mind before it was packed, the phone never answers, or it is a fake order.

Do it before Fulfill — the pieces go back on sale at once (6.3).

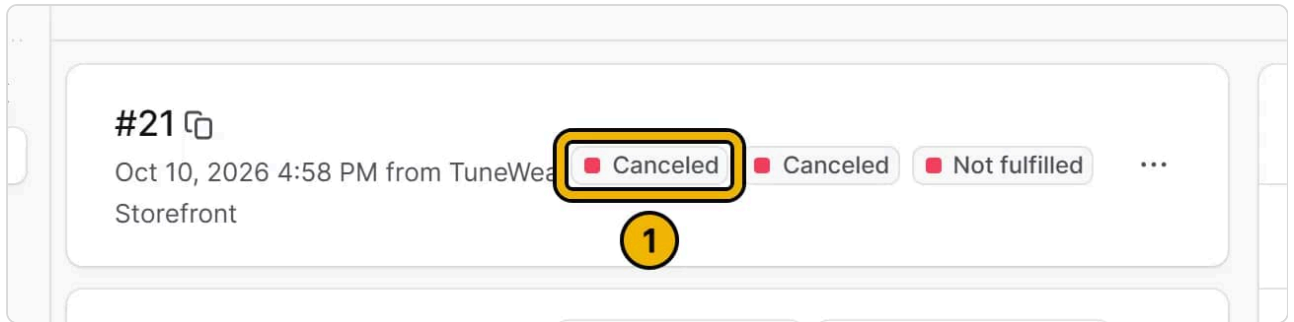

1. Top box of the order → ... (1) → **Cancel** (2).

2. Read the message, then **Continue** (1). This cannot be undone.

3. The order now shows **Canceled** (1).

Already fulfilled? Cancel refuses. If it has **not** left the shop: cancel the fulfillment first (**Fulfillment** box → ... → **Cancel**), then cancel the order. If it already went to the courier, it is a return (7.6.6) once it comes back.

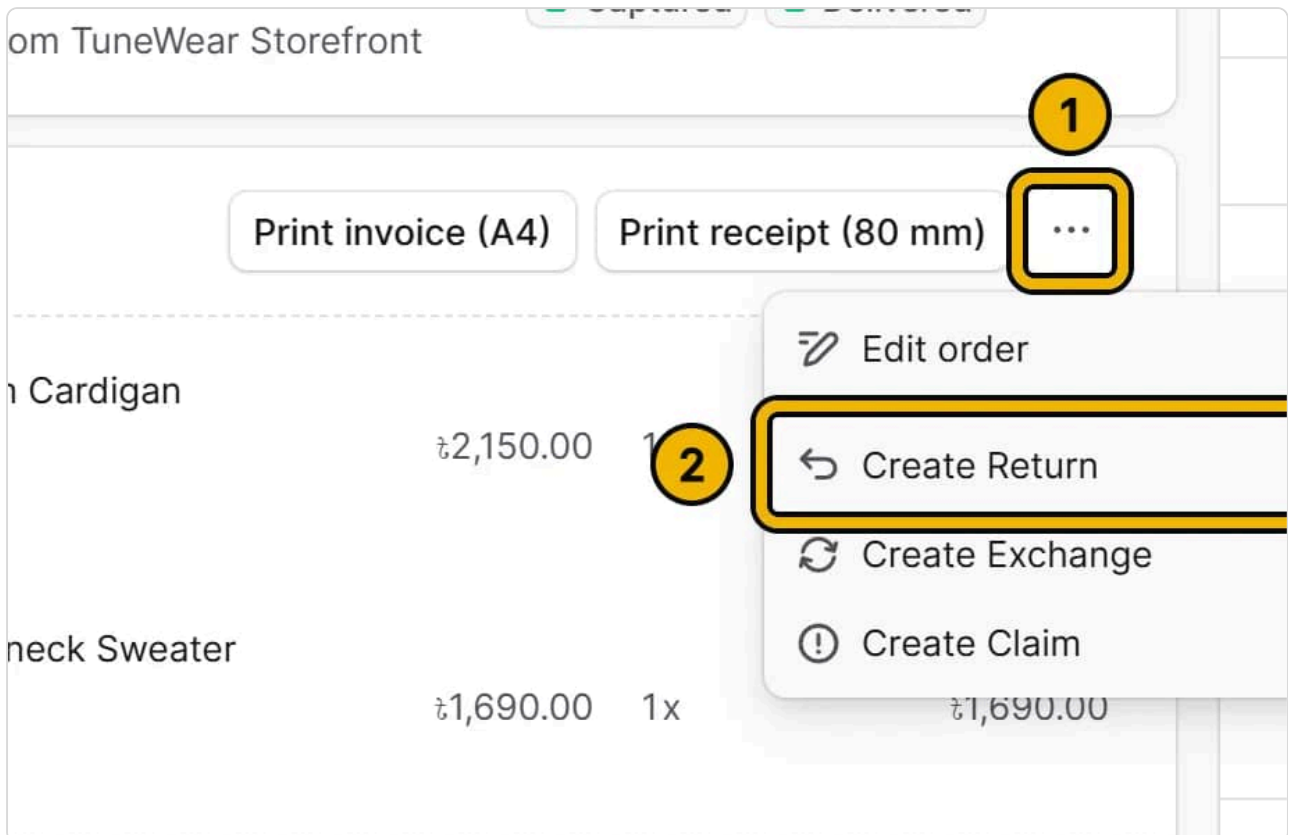

Paid online and cancelled? Give the money back too (7.6.7), with the reason **Cancelled order**.

7.6.6 A customer sends something back (a return)

When: a delivered piece comes back — wrong size, damaged, not as pictured. Worked example: the customer returns the **Cable Knit Button Cardigan** from order #20 because it is too small, and keeps the sweater.

The order must be **Delivered**. Do the return when the parcel is in your hands, so what you type matches what came back.

1. **Summary** box → ... (1) → **Create Return** (2).

2. **Add items** (1).

Create Return

Inbound

1

Add items

3. Tick the piece that came back (1) → **Save** (2). Tick only what actually came back; the sweater stays unticked.

Cancel Return **Confirm Return** 4

7. **Continue** to confirm.

8. Back on the order, the Summary shows the return and its reason (1). Press **Receive items** (2) once the piece is checked and back on the shelf. **Refund** (3) is the next section — do it **after** receiving.

9. The number (1) is how many came back — normally the number already there. **Save** (2). Stock goes back up by that number straight away; the piece is on sale again.

Stopped halfway? A **Return initiated** box appears at the top of the order with **Continue** (carry on where you left off) and **Cancel Return** (throw it away; nothing changes).

7.6.7 Give the money back (a refund)

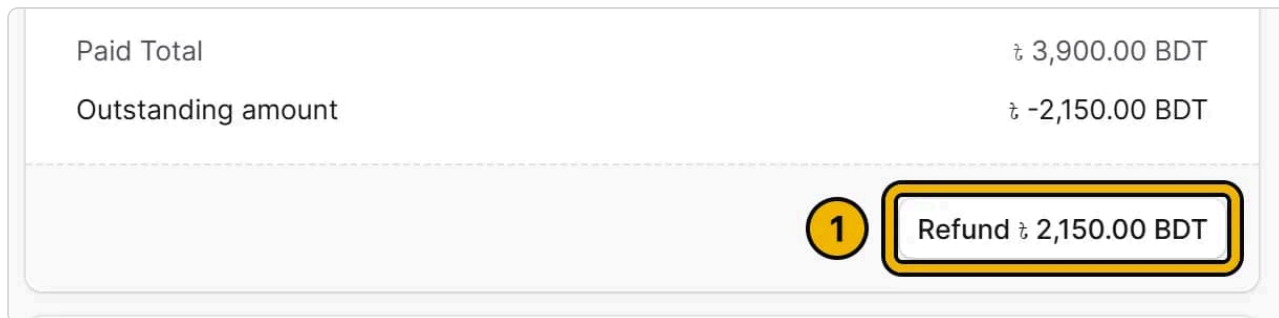

Who: Admin.

Pressing Refund here does NOT send any money. It records, on the order, that money went back and why — so sales and Analytics stay right. Send the money first, then record it:

The customer paid by	Send the money back
Online (card, bKash, Nagad)	In the SSLCommerz merchant panel — find it by its amount and date.
Cash on Delivery (already captured)	By bKash, Nagad or cash, the way you agreed with the customer.

Then:

1. Order page → **Refund** ₹... (1), under the order totals. It appears whenever the shop owes the customer money (after a return is received, or a paid order is cancelled) and already holds the right amount.

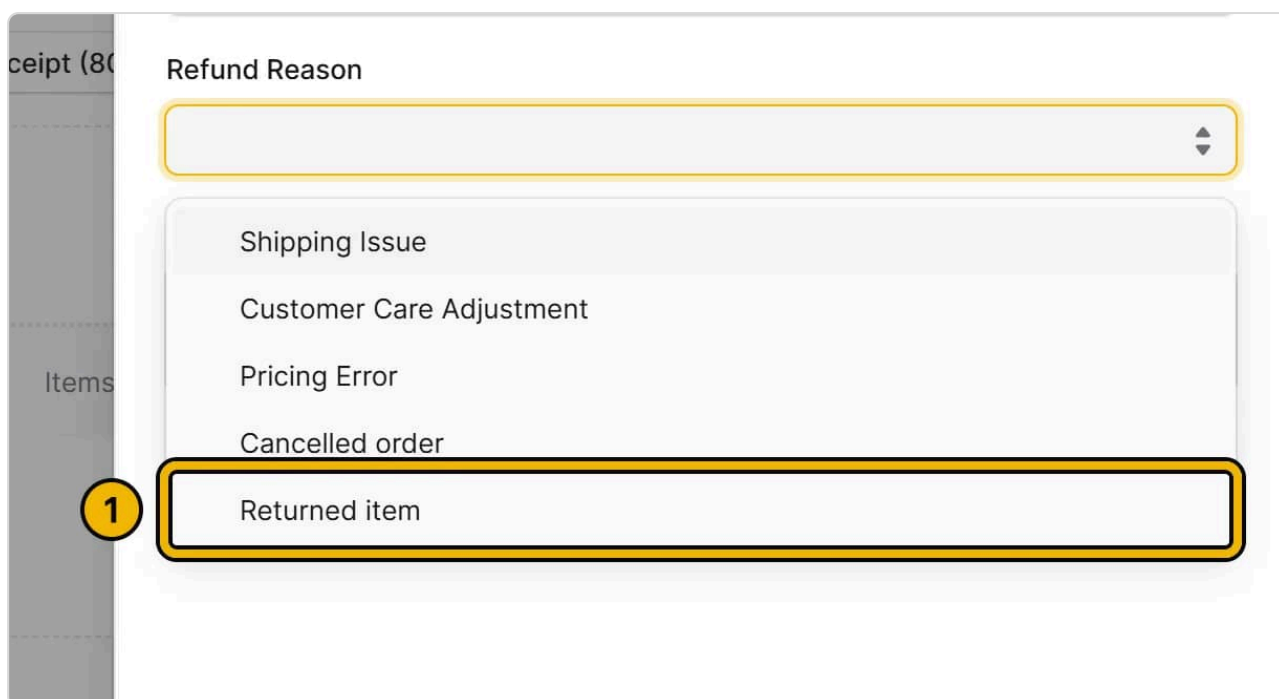

The screenshot shows the order totals section. It includes a table with two rows: 'Paid Total' with a value of '₹ 3,900.00 BDT' and 'Outstanding amount' with a value of '₹ -2,150.00 BDT'. Below this table, there is a button labeled 'Refund ₹ 2,150.00 BDT'. A yellow circle with the number '1' is placed next to the button.

Paid Total	₹ 3,900.00 BDT
Outstanding amount	₹ -2,150.00 BDT

1 Refund ₹ 2,150.00 BDT

2. **Select payment to refund** → the one payment on the order.
3. **Refund Reason** → pick why (1). For a return, **Returned item**.

The screenshot shows the 'Refund Reason' dropdown menu. The menu is open, displaying a list of options: 'Shipping Issue', 'Customer Care Adjustment', 'Pricing Error', 'Cancelled order', and 'Returned item'. The 'Returned item' option is highlighted with a yellow border and a yellow circle with the number '1' next to it.

Refund Reason

- Shipping Issue
- Customer Care Adjustment
- Pricing Error
- Cancelled order
- 1 Returned item

4. Check the form:

- (1) the payment;
- (2) **Amount** — filled in already with what is owed. **Check it** matches what you actually sent;
- (3) the reason;
- (4) **Note** — how and when you sent it, e.g. "Sent 2,150 Tk by bKash to 01700000001 on 10 Oct."
The next person to open the order will thank you;
- (5) **Save**.

The image shows a 'Create Refund' modal window with the following fields and callouts:

- 1** Select payment to refund: A dropdown menu showing '₳3,900.00 - System (DEFAULT) - (#WF5WKXZ)'.
- 2** Amount: A text input field containing '2,150.00' with a currency symbol (₳) on the right.
- 3** Refund Reason: A dropdown menu showing 'Returned item'.
- 4** Note: A text area containing 'Sent 2,150 Tk by bKash to 01700000001 on 10 Oct.'.
- 5** Save: A button labeled 'Save' next to a 'Cancel' button.

5. The **Payments** box shows the refund with its reason (1), and **Total paid by customer** drops by that amount.

1

Returned Item

- ₹2,150.00

Total paid by customer

₹ 1,750.00 BDT

Do not refund from the payment's own ... menu. It fills in the **whole payment**, not what is owed, and saving a wrong amount cannot be undone. Use the **Refund ₹...** button from step 1.

"I paid but there is no order." If a customer says this, look the payment up in the SSLCommerz merchant panel. If SSLCommerz shows it paid and there is no order here, refund it there or type the order in as a Draft order (7.4) — tell your developer either way, because it should not happen.

7.6.8 The reason lists

The shop comes with these, ready to pick:

Return reasons (7.6.6)	Refund reasons (7.6.7)
Wrong size / doesn't fit	Returned item
Damaged or faulty	Cancelled order
Wrong item sent	Shipping Issue — lost, late or wrong address
Not as pictured	Customer Care Adjustment — goodwill, "sorry" Tk
Changed mind	Pricing Error — charged too much, missed a code

To add, rename or remove one (**Admin**): **Settings** → **Return Reasons** (1) or **Refund Reasons** (1) → **Create** (2), or ... on a row to edit or delete it. **Label** is what you will see in the list. **Value** (or **Code**) is a short name for the computer: small letters and `_`, no spaces — for "Sleeves too long", type `sleeves_too_long`.

Customer groups (sidebar **Customers** → **Customer Groups** → **Create**) collect customers for a special price list (3.2) or a promotion (4.2), for example "Wholesale" or "VIP".

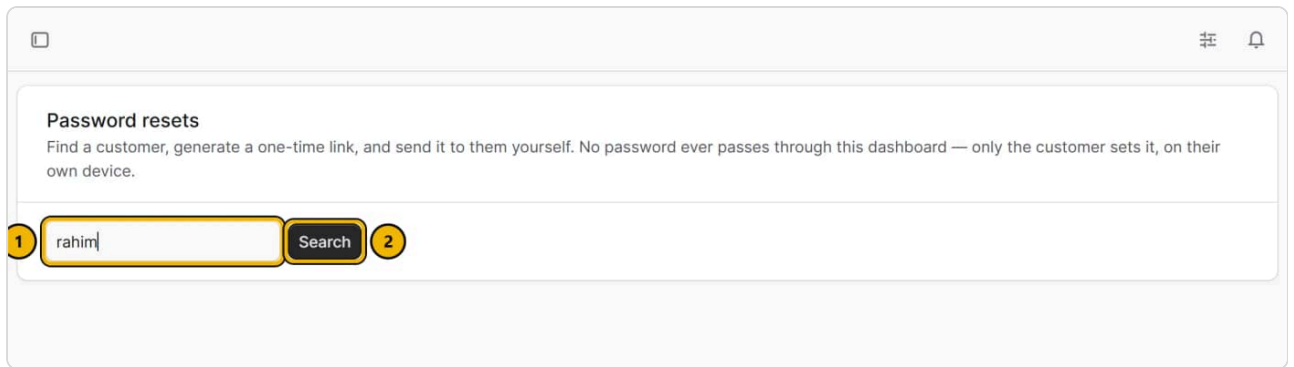

8.2 Resetting a customer's password

When: a customer cannot log in and asks for help.

Who: Super Admin, or an Admin marked **Trusted** (12.3). Never Staff.

The shop does not send emails yet, so you make the link and send it yourself (WhatsApp, SMS). You never see or type their password.

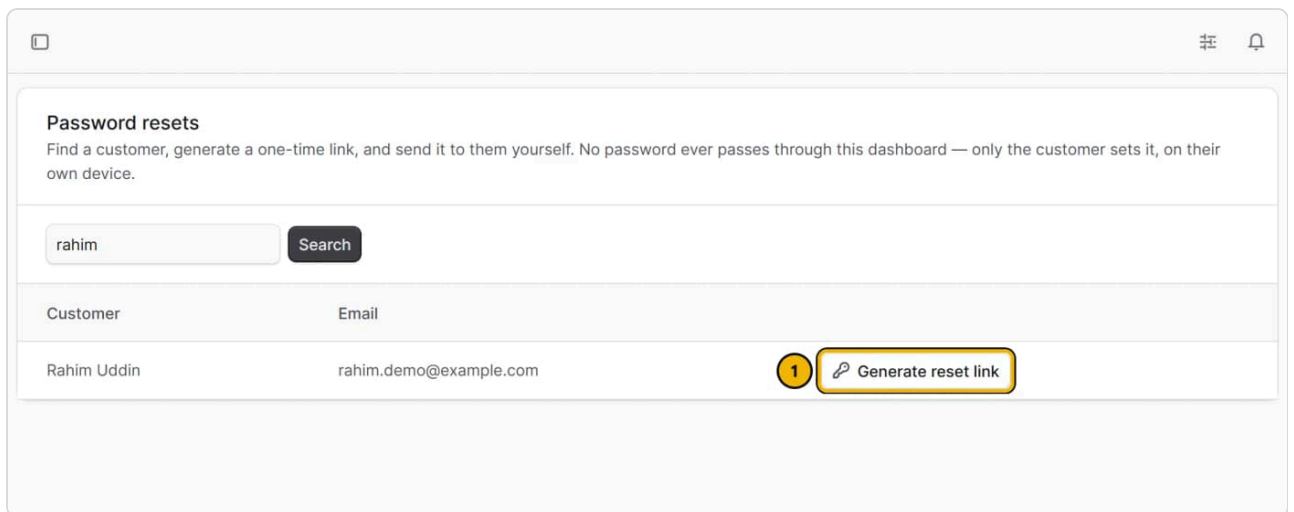

1. Sidebar **Password resets** → type their name or email (1) → **Search** (2).

Password resets
Find a customer, generate a one-time link, and send it to them yourself. No password ever passes through this dashboard — only the customer sets it, on their own device.

1 **Search** 2

2. **Generate reset link** (1) on the right person.

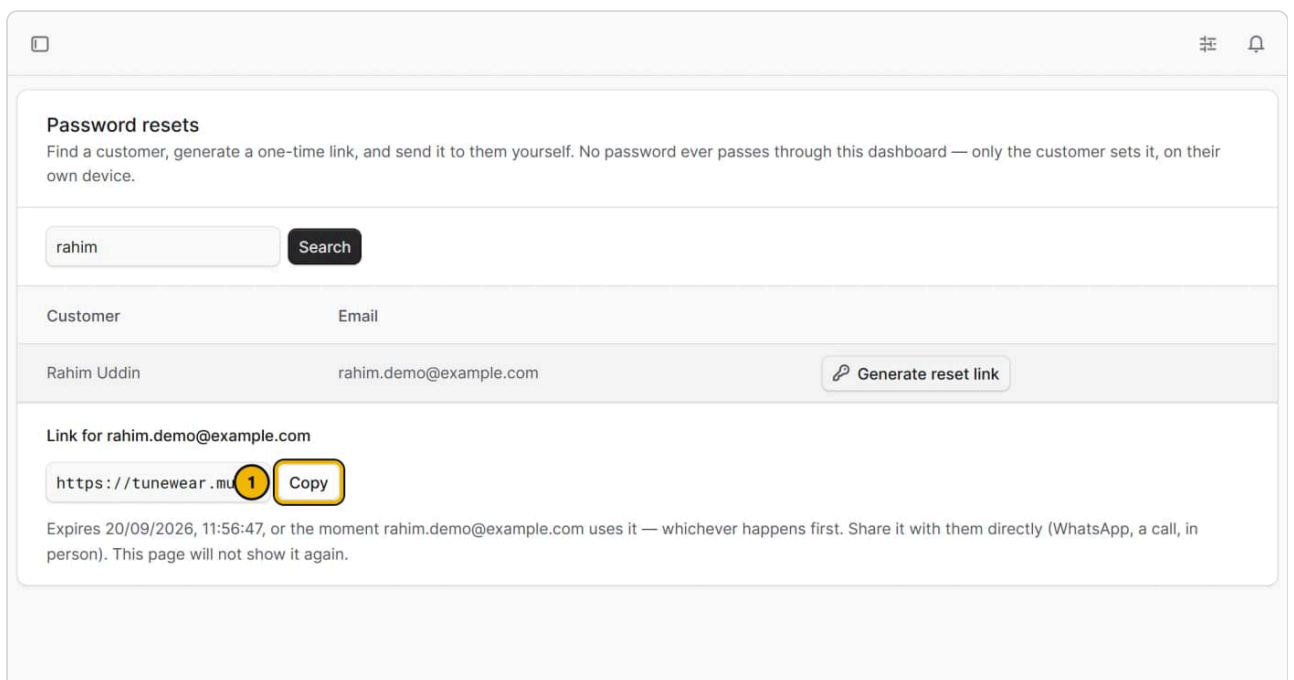

Password resets
Find a customer, generate a one-time link, and send it to them yourself. No password ever passes through this dashboard — only the customer sets it, on their own device.

Search

Customer	Email
Rahim Uddin	rahim.demo@example.com

Link for rahim.demo@example.com

1 **Copy**

Expires 20/09/2026, 11:56:47, or the moment rahim.demo@example.com uses it — whichever happens first. Share it with them directly (WhatsApp, a call, in person). This page will not show it again.

9. Shop claims — what the site says about the business

When: to set the three tiles under every product photo — happy customers, rating, and a quality claim.

Who: Admin and above.

Sidebar **Shop claims**. Anything left empty is left off the site — an unsaid claim is better than an untrue one.

- **Happy customers** — a number you type, or **Use real** to show the real count of customers who ordered. "From real orders at 10" means the real number takes over once the shop has 10.
- **Product rating** — used by every garment without its own. Leave it empty if no one has rated your products.
- **Third tile** — your own wording and icon, for example "100% Premium quality".
- **One garment at a time** — a product's own rating or customer count, where it differs. A faded number means it is using the shop's.

What the shop says about you
Three tiles under every product photograph. Anything left empty is left off the page — an unsaid claim is better than an untrue one.

Claim	Value
Happy customers From real orders at 10 — you have 11	From orders Use real Save
Product rating Used by every garment without its own	Not set Save
Third tile Brand voice — its wording and icon are yours	100% Premium quality Award Save

One garment at a time
Only where a garment differs from the values above — a faded number in a box means it is using the shop's. Nothing here is generated: a rating tells a shopper other customers scored the piece, so it has to be one you stand behind.

Garment	Rating	Happy customers
Cable Knit Turtleneck Sweater	None	1 Use real (4) Save
Diamond Cable Tunic Sweater	None	Shop's Use real (0) Save
EXS Drip Jacquard Sweater	4.5	22 Use real (2) Save
Checkerboard Knit Sweater	4.7	69 Use real (4) Save
Cable Knit Button Cardigan	None	Shop's Use real (0) Save
Colour-Block Zip Knit Polo	None	Shop's Use real (1) Save

A rating tells shoppers other customers scored the piece. Only enter one you can stand behind.

10. Sales channels

Sidebar **Settings** → **Sales Channels**. There are three: **TuneWear Storefront** (the website), **Facebook DM** and **Insta DM** (orders taken in messages, typed in as Draft orders — 7.4). Every new product is put in all three by itself. There is **no Facebook or Instagram shop connected**.

Settings ▶ Sales Channels

11. The website's words and photos (Payload)

Where: `https://tunewear.<domain>/admin` — a different login from Medusa.
Who: anyone with a Payload login. Payload has its own two roles: **Super Admin** (can add and remove Payload logins) and **Admin** (edits everything else). Medusa's roles do not apply here.

11.1 Three things that surprise people

1. **Save publishes immediately.** There is no draft: the live page shows the change within about 2 seconds.
2. **Live Preview** — the eye button beside Save (1) opens the real page beside the form. It refreshes **when you press Save**, not as you type.
3. **Sale prices are not here** — they are Medusa's (chapter 3).

11.2 The pages

Sidebar entry	What it edits
Pages → Home	Hero, the Men / Women / Sale cards, the sale section on/off, section headings, brand story
Pages → Men, Women	Each aisle's hero and text (the category tiles are Medusa's, chapter 2)
Pages → Sale	Masthead, Mix & Match photo, the prepaid-offer strip (strip on/off, countdown on/off, end date)
Pages → New arrivals, Shop all	Page headings
Pages → About, Contact, FAQ & more	About, Contact, FAQ, Shipping, Returns, Size guide, Privacy policy, your pages
Site content → Footer	Footer columns and links, the newsletter box on/off
Site content → Trust Bar	The reassurance strip (delivery, returns, secure payment)
Site content → Announcement strip	The scrolling words under the header — one list for home, one for other pages
Media	Every uploaded photo and video, with a focal point for photos (what stays in frame when cropped)

Which products appear is not set here. Payload holds the words and photos; the products come from Medusa. New arrivals lists the products tagged `new-arrival` (1.11). The Sale page's row lists the products in a sale price list (3.2).

Example — the Home page: open **Pages** → **Home**, change a heading, **Save**.

Hiding the sale, the offer strip or the timer — and bringing them back

Three switches. Untick to hide, tick to show again, then **Save**. What you typed is kept while hidden; nothing has to be retyped.

To hide...	Go to	Switch
Just the countdown timer	Pages → Sale → Prepaid offer strip	Show the countdown
The whole offer strip ("Extra 10% off..."), on the home page and Sale page	Pages → Sale → Prepaid offer strip	Show this strip
The sale section on the home page (Sale masthead, best-deals row, strip)	Pages → Home → Sale section	Show the sale section

The last one only changes the home page; `/sale` itself stays. The change is live within seconds of **Save**.

11.3 The FAQ

Pages → About, Contact, FAQ & more → FAQ → the FAQ block → one row per question: **Question** (1), **Topic** (2), **Answer** → **Save**.

- **Topic** groups questions under headings. One topic only = a plain list.
- Topic buttons appear with two or more topics; a search box with six or more questions.
- The "Still have a question?" card uses the WhatsApp number from Contact.
- The questions on staging are **demo text** — replace them before launch.

Last Modified: September 12th 2026, 7:22 AM Created: September 11th 2026, 8:05 AM

Save

Replace these with your own questions — edit this page in the admin.

Optional line above the questions, e.g. "Still have a question? Message us on the Contact page."

11.4 The Contact page

WhatsApp, phone, email, address, hours and social links live in the Contact block. A field left empty (or still [Add ...]) never becomes a dead link. There is no message form on purpose — customers message you directly.

11.5 Adding a page (Shipping, Returns, Size guide...)

Pages → **About, Contact, FAQ & more** → **Create New** → **Title** (1, only shown in this list), **Slug** (2, the address: `shipping` → `/shipping`) → **Add Block** (3) → **Save**. Then link it from **Site content** → **Footer**. Addresses the site already uses (`men`, `sale`, `checkout` ...) are refused with a message saying where that page is edited.

3

Blocks

+ Add Block

A **Section (columns)** block puts other blocks side by side, with its own tablet and phone layouts ("Reverse the column order when stacked" puts the photo first on phones).

A **Text** block has three widths: **Narrow** (short lines at the left), **Centred column** (wider, in the middle of the page — use it for every section of a long page like Shipping, Returns or the Privacy policy) and **Full width** (short lines only).

The **Shipping** and **Returns** pages are filled in from what the shop already says (delivery time, payment, exchanges). The delivery charges on Shipping are the **Delivery charges (from Medusa)** block: they always match checkout, and change only in Medusa (chapter 5). The line in [square brackets] on Returns — how many days a return can be asked for, what cannot be returned, how refunds are paid — is yours to write.

The **Size charts (from Medusa)** block shows every category's size chart (2.5). It is already on the **Size guide** page; it has only an optional heading, because the charts themselves are edited in Medusa.

11.6 Privacy policy

Pages → **About, Contact, FAQ & more** → **Privacy policy** (/privacy-policy , linked from the footer). It arrives as a draft written from how the site works. Replace every part in **[square brackets]** — business name and address, courier, how long you keep records, your WhatsApp and email — have it checked, delete the first "[Draft ...]" line, and **Save**.

11.7 Photo guide — sizes, shapes, and the focal point

When you need this: every time you upload a photo, anywhere. The website crops each photo to fit a frame, and a photo in the wrong shape loses its head or its garment to the crop. Get the shape right before you upload and it always looks right.

Quick reference — size and aspect ratio of every photo

Aspect ratio is width : height. The last column says whether the focal point (below) works for that photo.

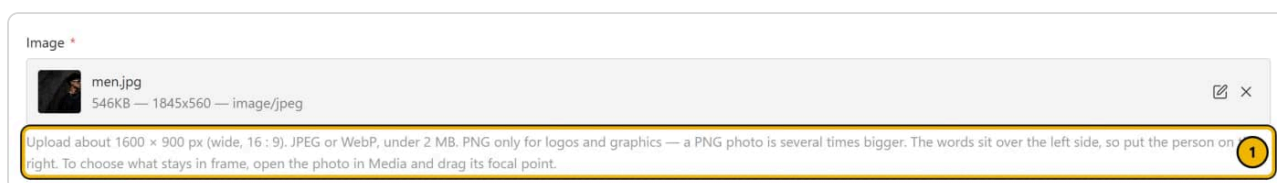

Photo	What it does	Upload size	Aspect ratio	Focal point
Product photo	The pictures you add to a product. Shown on the shop cards and the product page.	1200 × 1800 px	2 : 3 (tall)	No
Category tile	The picture on each tile on /men and /women.	1200 × 1200 px	About 1 : 1 (4 : 5 on phones, 5 : 4 on computers)	No
Home page hero	The big banner photos that slide at the top of the home page.	1845 × 560 px	About 3.3 : 1 (wide band)	Yes
Home page hero video	Plays instead of the sliding photos when Background is Video (11.9). Silent, loops.	1920 × 1080 px · MP4 · under 6 MB · up to 20 s	16 : 9 (trimmed to the wide band)	No
Home page hero phone video (optional)	The same clip cut tall for phones. Recommended: phones download less and see the whole shot.	1080 × 1350 px · MP4 · under 4 MB · up to 20 s	4 : 5 (tall)	No
Men and Women page heroes	The banner at the top of /men and /women.	1845 × 560 px	About 3.3 : 1 (wide band)	Yes
Men / Women / Sale cards (home)	The three photo cards under the home page hero.	1600 × 900 px	16 : 9 (wide strip)	Yes
Sale page banner	The banner at the top of /sale.	1845 × 560 px	About 3.3 : 1 (wide band)	No
Mix & Match photo (Sale)	The photo behind the Mix & Match strip on the Sale page.	1845 × 560 px	About 3.3 : 1 (wide band)	Yes
Brand story (home)	The photo beside the "Made in Dhaka" story on the home page.	1600 × 1000 px	16 : 10	No
Photograph block, Wide	One photo with a caption, in a wide shape.	1600 × 900 px	16 : 9	Yes
Photograph block, Square	The same block, in a square shape.	1200 × 1200 px	1 : 1	Yes
Photograph block, Tall	The same block, in a tall shape.	1200 × 1500 px	4 : 5	Yes
Photo slider block	A sideways-scrolling row of tall photos with captions.	1200 × 1500 px	4 : 5	Yes
Gallery block (called Photo grid in Add Block)	Shows several photos as square tiles, 2 to 4 across, so a set of photos reads as one grid.	1200 × 1200 px	1 : 1	Yes

Photo	What it does	Upload size	Aspect ratio	Focal point
Image Text block	A photo beside a paragraph and a button, like "Built for the cold snap" on About.	1600 × 1200 px	4 : 3	Yes
Section (columns) background	The photo behind a whole Section (columns) block.	1845 × 900 px	About 2 : 1	Yes

The **blocks** in this table (Photograph, Photo slider, Photo grid, Image Text, Section) are the pieces you add to a page with **Add Block** (section 11.5). Each has its own photo box, so each has its own shape. The rest of this section explains each one.

The four rules

1. **Crop to the frame's shape before you upload** — the table below says which. This is more reliable than anything the website can do for you.
2. **Keep the person or garment in the middle**, with space around them.
3. **Bigger in pixels is fine, smaller is not — but every file must be under 2 MB**. A photo smaller than the size in the table looks soft. Save it as JPEG or WebP; a file over 2 MB is refused with a message. Too big? Drop it into **tinypng.com** (free), download the smaller copy and upload that. The website still makes it lighter for phones by itself. Every upload box says the size it wants (1):

4. **Give every photo a description** in the **Alt** box. It is read to people who cannot see the photo, and it is required.

Where each photo goes

Photo	Where you upload it	Shape	Upload about	Keep in mind
Product photos	Medusa → the product → Media (1.10)	Tall, 2 : 3	1200 × 1800 px	The big photo on the product page trims a little off the top and bottom (4 : 5)
Category tile (the pictures on /men and /women)	Medusa → the category → Tile photograph (2.3)	Nearly square	1200 × 1200 px	Head well below the top edge; no focal point here
Home page hero and the Men / Women page heroes	Payload → Pages → Home, Men, Women	A wide band	1845 × 560 px	On a phone the band is almost square, so only the middle third of the width shows — keep the person in the middle
Home page hero video (11.9)	Payload → Pages → Home → Hero → Video	Wide video, 16 : 9	1920 × 1080 px, MP4, under 6 MB, up to 20 seconds	The top and bottom are trimmed to a wide band — keep the action in the middle
Home page hero phone video (11.9, optional)	Payload → Pages → Home → Hero → Phone video	Tall video, 4 : 5	1080 × 1350 px, MP4, under 4 MB, up to 20 seconds	Recommended: phones download less and show the whole shot
Men / Women / Sale cards under the home hero	Payload → Pages → Home	Wide strip	1600 × 900 px	The words sit over the left side, so put the person on the right
Sale page banner and the Mix & Match photo	Payload → Pages → Sale	Wide band	1845 × 560 px	Darkened so the words stay readable
Photograph block, a page you add (11.5)	Payload → the page → Photograph	You pick: Wide, Square or Tall	Wide 1600 × 900, Square 1200 × 1200, Tall 1200 × 1500 px	The photo is cropped to the shape you pick
Photo slider and Photo grid blocks	Payload → the page	Slider tall (4 : 5), grid square	1200 × 1500 px / 1200 × 1200 px	Use photos of one shape in the same block
Image Text block	Payload → the page	Landscape (4 : 3)	1600 × 1200 px	
Brand story (home)	Payload → Pages → Home	Landscape (16 : 10)	1600 × 1000 px	
Section (columns) background photo	Payload → the page → Section	Fills the whole section	1845 × 900 px	Darkened; keep the subject in the middle

If you are unsure, upload the **biggest, cleanest** version you have, with the person in the middle. The website never stretches a photo; it trims.

One photo for computers and another for phones

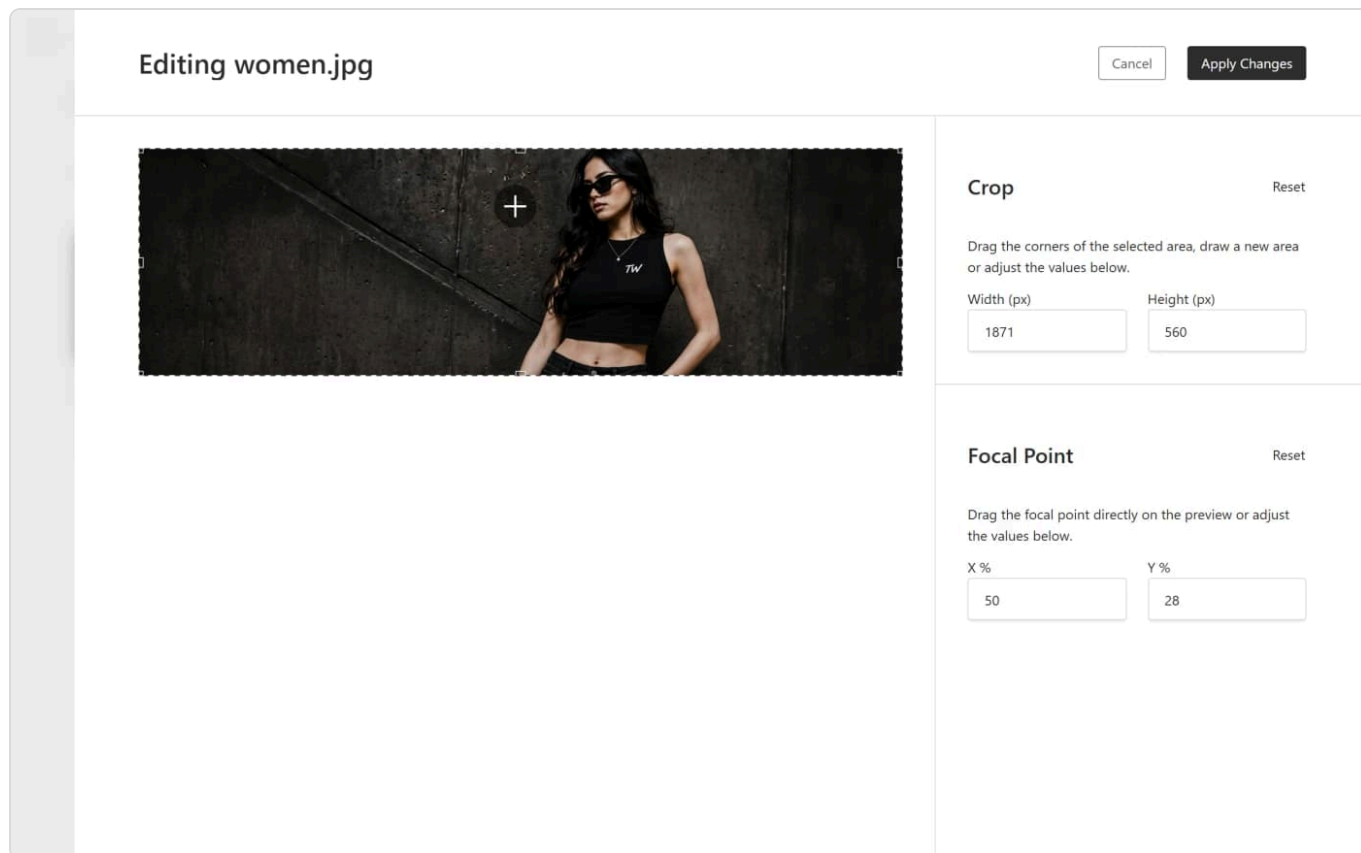

Payload has no "phone photo" box: a photo you upload is used on every screen. If a picture needs to look different on a phone, do it in two steps: build the part as **two Section (columns) blocks**, one with the computer photo and one with the phone photo, and set **Show on** in each (**Computers only** for one, **Phones and tablets only** for the other). Only one of them shows on any screen. Use this for the odd banner, not for every photo; one well-framed photo is easier to look after.

The focal point — choosing what stays in the picture

When a photo has to be trimmed, the website keeps the part around its **focal point**, which starts in the middle. Move it onto the face or the garment and every trimmed version stays centred on that.

1. **Media** (sidebar) → click the photo.
2. Click **Edit Image** (1).
3. In the **Focal Point** box drag the + on the picture onto what matters most, or type the **X %** (left to right) and **Y %** (top to bottom) numbers. **50** and **50** is the middle.
4. **Apply Changes**, then **Save**. The change is live within seconds.

Where the focal point is used. It works for the **home page hero**, the **Men and Women page heroes**, the **Men / Women / Sale cards**, the **Mix & Match** photo, and the **Section (columns)**, **Hero**, **Photograph**, **Photo slider**, **Photo grid** and **Image Text** blocks. It does **not** work for the **Sale banner**, the **Brand story**, product photos or category tiles: those are framed by hand or managed in Medusa and always trim from the middle, so crop those photos to shape before you upload.

The focal point belongs to the **photo**, not to the place it is used, so a photo used in two places is framed the same in both. It only changes how a photo is trimmed: a photo already in the right shape shows the same either way.

11.9 The home page hero — a video, and how dark it is

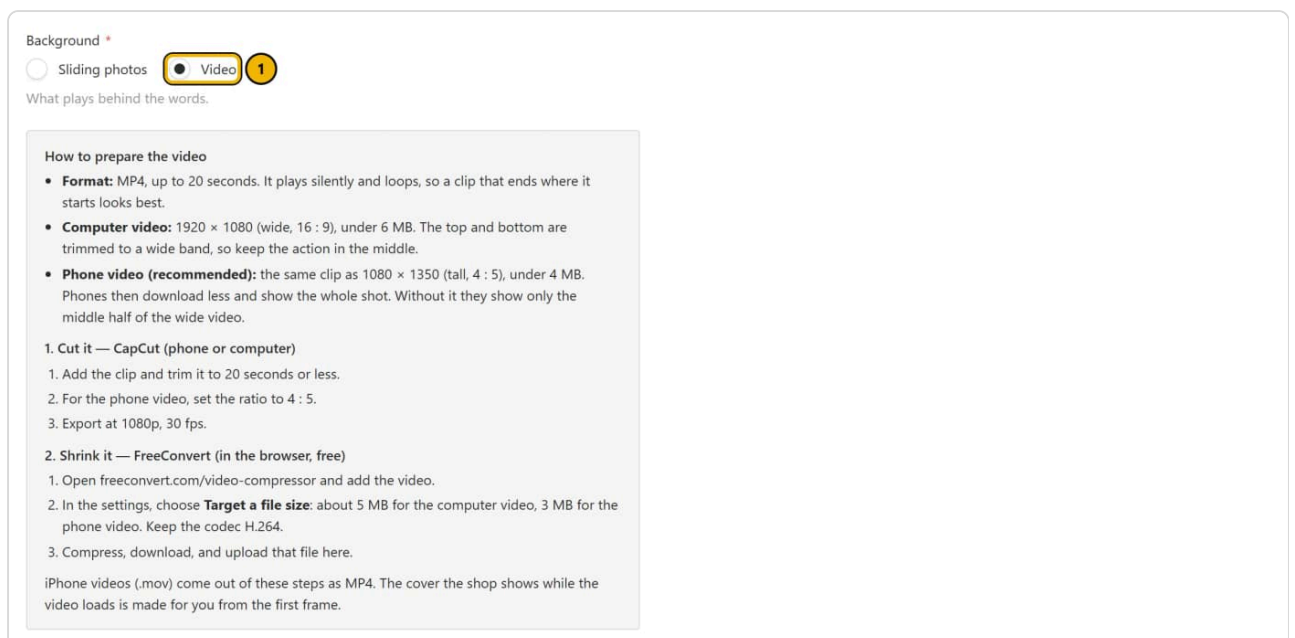

Where: Payload → **Pages** → **Home** → **Hero** tab. Press **Save** when done; the shop changes within seconds.

How dark the picture is. The photo or video behind the words is darkened so the white words stay readable. Drag the **Darkness** slider (1): left is lighter, right is darker. **0** is not darkened at all, **100** is black, **40** is how the shop has always looked. The small picture under the slider shows the result straight away, on your own first photo or video. Bright daylight shots usually need more.

A video instead of the sliding photos.

1. Under **Background**, choose **Video** (1). The photo list hides — it is kept, so choosing **Sliding photos** again brings it back — and a box appears saying how to prepare the video.

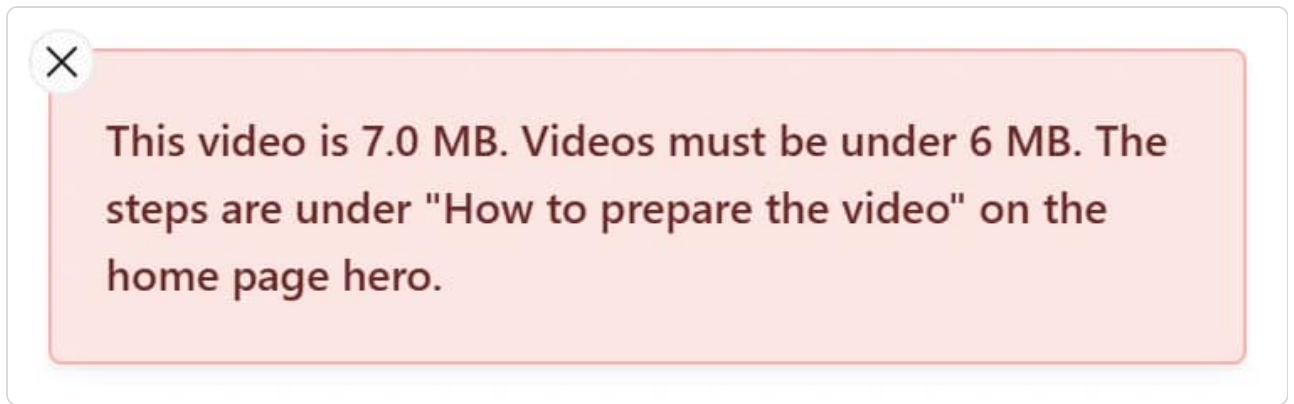

2. Under **Video**, **Create New** and choose the file (or **Choose from existing** if it is already in Media). Give it a short description in **Alt**, then **Save** in that panel.
3. Wait a few seconds for **Cover ready**. The website takes the video's first frame as its **cover**: shoppers see it the moment the page opens, and the video takes its place as soon as it is playing, so there is no black gap. You do not upload a cover yourself.
4. **Phone video (recommended)**: add the same clip cut tall, 4 : 5, the same way. Phones then download the smaller file and show the whole shot; without it, phones show only the middle of the wide video.
5. Set the **Darkness**, then **Save**.

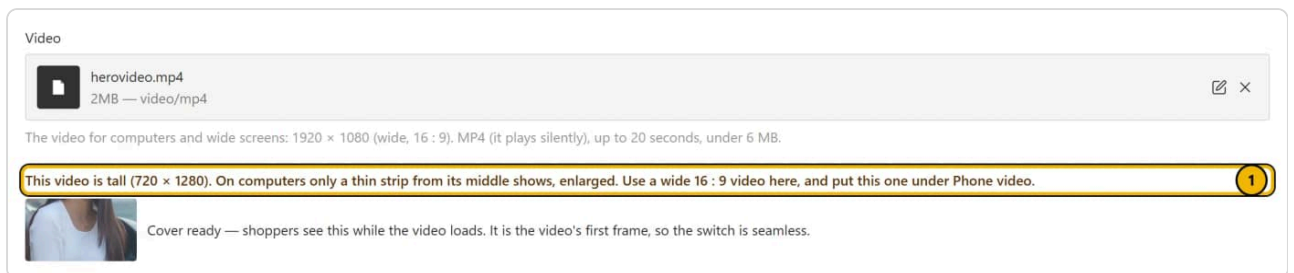

Shoppers who have asked their phone to **reduce motion** or **save data** see the cover only, and do not download the video.

What the website checks for you

- A video over **6 MB** (phone video over **4 MB**), or a file that is not MP4, is refused with the reason:

- A video this browser cannot play — usually an iPhone **.mov** — gets no cover, and the hero will not save until it is replaced. It would not play for shoppers either.
- A video the wrong shape for its box is flagged (1) — for example a tall phone clip in the **Video** box, where computers would show only a thin strip from its middle. It still saves; swap it if the warning is right.

How to prepare a video (the same steps are in the box in Payload)

What	Computer video ("Video")	Phone video
Shape	Wide, 16 : 9	Tall, 4 : 5
Size	1920 × 1080 px	1080 × 1350 px
File	MP4 , under 6 MB	MP4 , under 4 MB
Length	Up to 20 seconds	The same clip
Sound	Not played — it does no harm	Not played

1. **Cut it in CapCut** (phone or computer, free): trim the clip to 20 seconds or less; for the phone video set the ratio to **4 : 5**; export at **1080p, 30 fps**. A clip that ends where it starts loops best.
2. **Shrink it with FreeConvert** (free, in the browser — the TinyPNG of video): open **freeconvert.com/video-compressor**, add the video, open the settings, choose **Target a file size** — about **5 MB** for the computer video, **3 MB** for the phone video — keep the codec **H.264**, compress, and download.
3. Upload that file as above.

Changing the video later. Choose the new one in the hero and **Save**; the cover is made again and shoppers get the new video at once. If you replaced the file inside **Media** instead, open **Pages** → **Home** → **Hero** once, wait for **Cover ready**, and **Save**, so the cover matches.

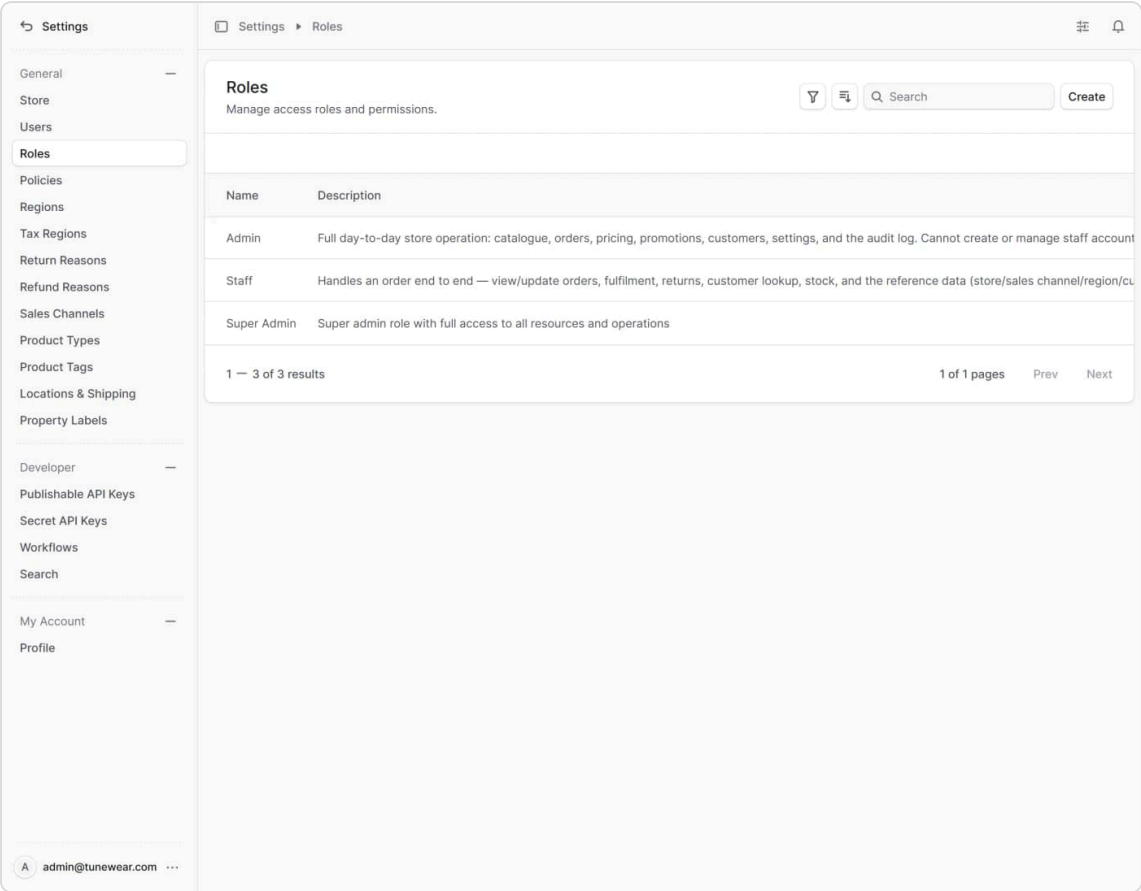

Each time a video is chosen, its cover is saved in **Media** as a photo named "... (first frame)". Covers of videos you no longer use can be deleted there.

12. Staff and roles

Who: Super Admin only.

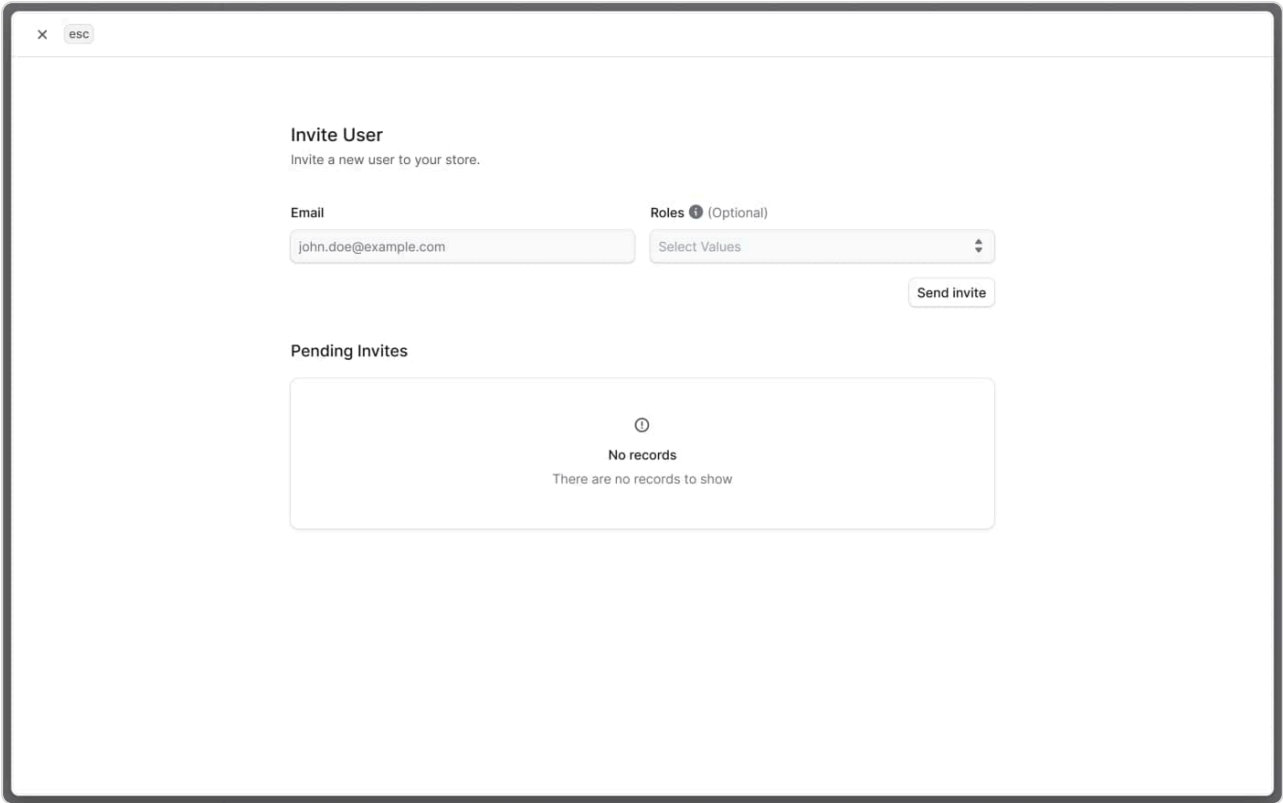

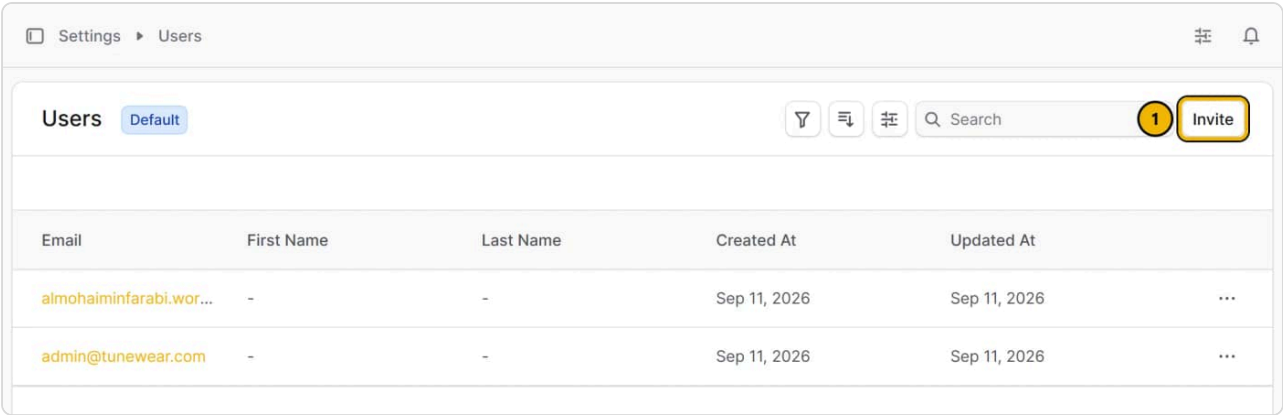

12.1 The roles

Role	Can	Cannot
Super Admin	Everything, including staff accounts and roles	—
Admin	Products, categories, orders, prices, promotions, customers, settings, analytics	Manage staff; see the audit log or make reset links unless Trusted
Admin + Trusted	Everything Admin can, plus the audit log and password reset links	Manage staff
Staff	Orders (open, pack, ship, cancel, returns), customers, products and variants, stock	Capture payment, refunds, price lists, promotions, analytics, audit log, categories, staff

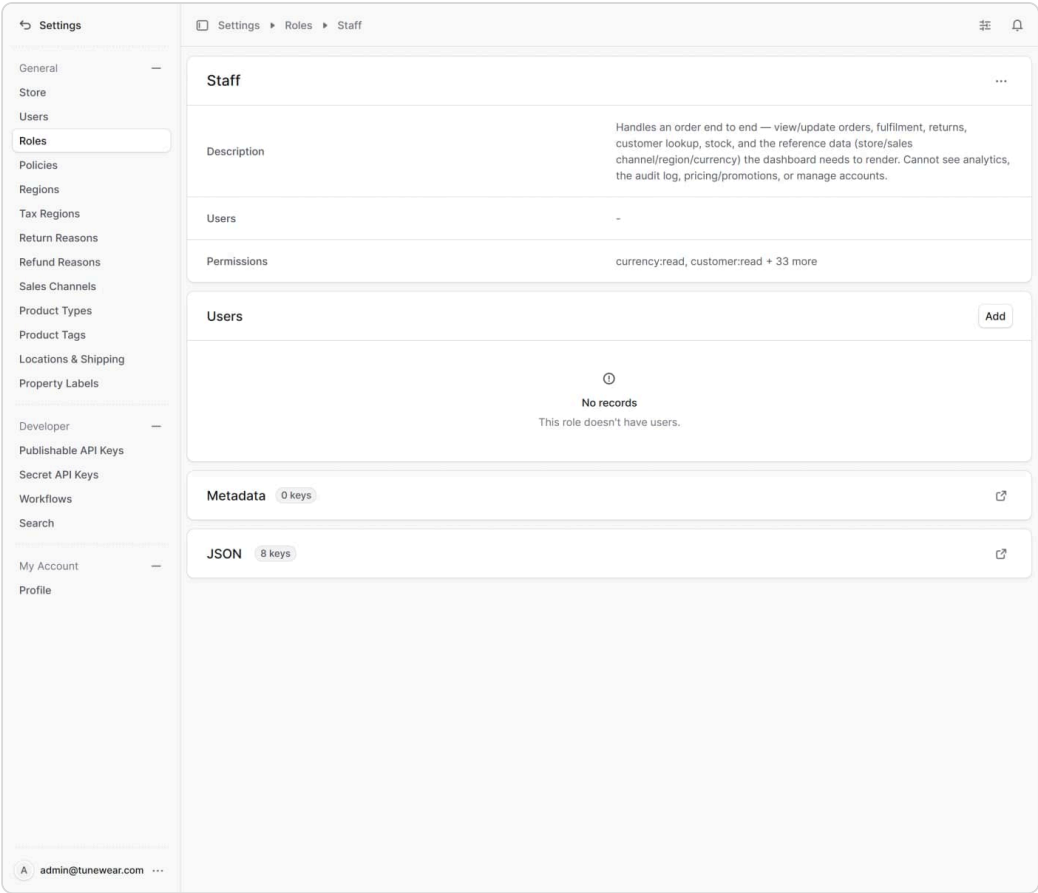

12.2 Adding someone

1. **Settings** → **Users** → **Invite** (1) → their email → send them the invite link.

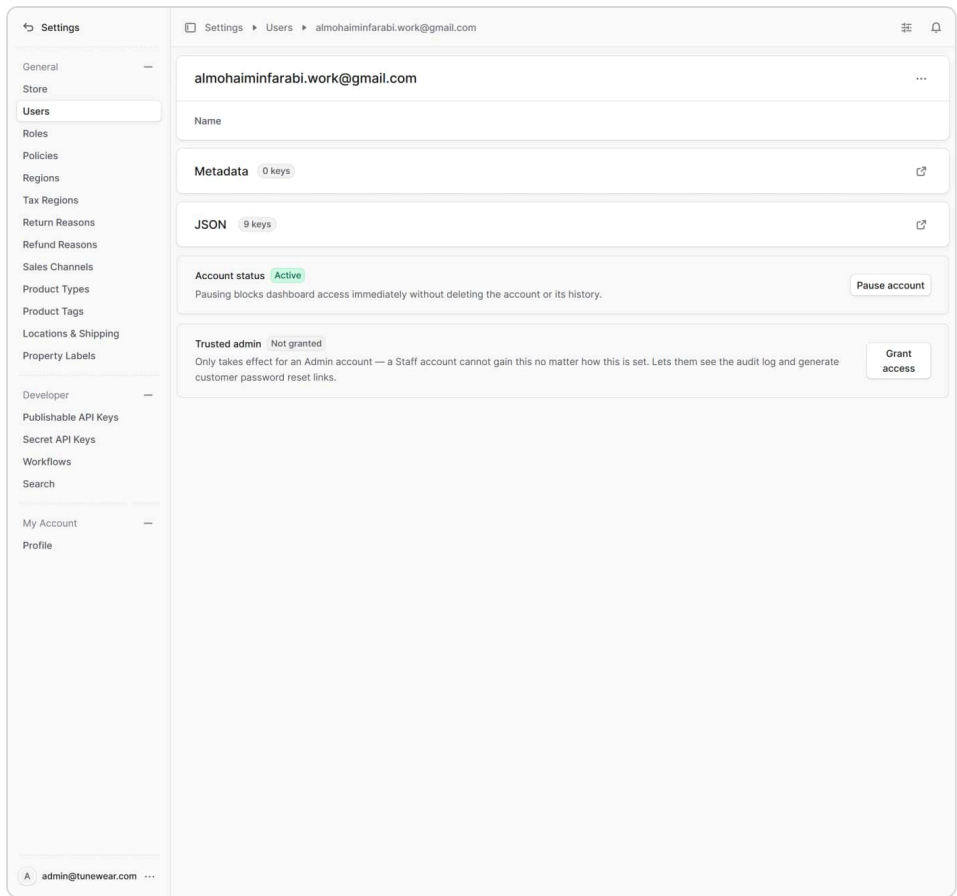

2. Give them a role: **Settings** → **Roles** → the role → **Users** → **Add**.

12.3 Pausing an account, and Trusted

On the person's page (**Settings** → **Users** → them):

- **Pause account** — blocks them at once, even mid-session, without deleting anything. Resume the same way.
- **Trusted admin** → **Grant access** — lets an **Admin** see the audit log and make password reset links. It has no effect on Staff.

12.4 The audit log

Sidebar **Audit log**: every change made in the dashboard — who, what, when — in plain sentences. Super Admin, or a Trusted Admin.

13. Store settings

Who: Admin and above.

- **Settings** → **Store** — the shop's name and currency (BDT).

- **Settings** → **Product Types** — `men` , `women` , `unisex` . **Do not rename or add types:** the website reads exactly these three to decide /men and /women. Any other type shows on both aisles.

- **Settings** → **Locations & Shipping** — delivery charges (chapter 5).

- **Settings → Publishable API Keys — do not touch.** The website uses this key to load products; revoking or deleting it takes every product off the site.

Settings ▶ Publishable API Keys

Publishable API Keys

Manage API keys used in the storefront to limit the scope of requests to specific sales channels.

14. Analytics, and the visitor report

14.1 Analytics (in Medusa)

Sidebar **Analytics** (Admin and above). Pick the period at the top right.

Number	Means
Orders	Orders placed in the period
Revenue	What those orders came to
Average order value	Revenue divided by orders
Profit	Revenue minus cost price — only for products with a cost price (1.9); it says how many

Below them: the revenue trend, orders per day, best sellers (with stock left) and revenue by product.

14.2 Visitors and what they did

On the **Analytics** page, top right: **Open visitor report**. It opens in a new tab and asks for **your visitor-report login** — a username and password your developer gives you, separate from this admin. (If the page says "Visitor report not set up yet", ask your developer.)

The very first time, after logging in you land on an empty **Websites** page. Come back to this tab and press **Open visitor report** again — it now goes straight to TuneWear, and it will every time after, because your browser stays logged in.

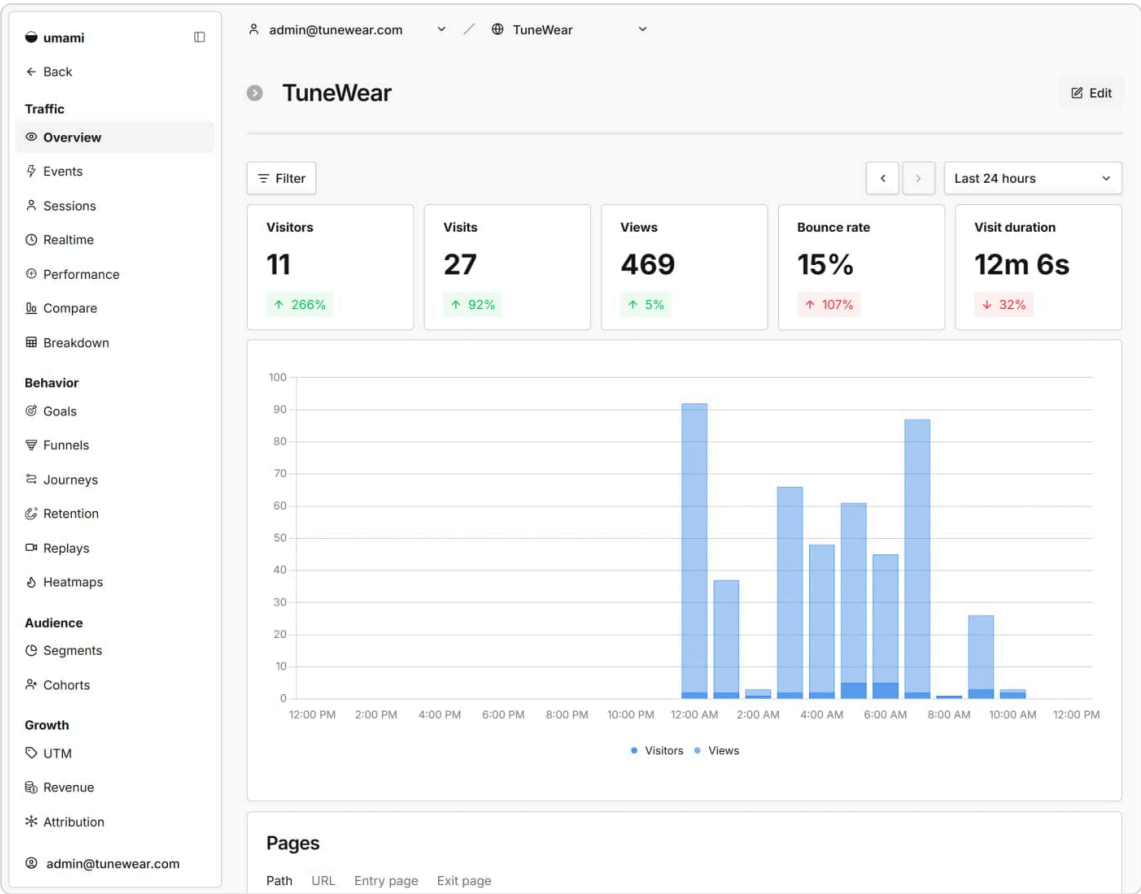

Your login can only look: nothing you click there changes the shop or its settings. The menu on the left has many pages; these three are the ones worth knowing:

Page	Shows
Overview	Visitors, the pages they read, where they came from (Facebook, Google...), and their country
Events	What shoppers did: Added to bag (which garment and size) and Order placed
Realtime	Who is on the shop right now

There is no money in the visitor report on purpose: sales, order values and profit are all in **Analytics** (14.1). Its **Revenue** page stays empty — that is expected.

Pick the period at the top right, as in Analytics.

Why are the two order counts a little different? Analytics (14.1) counts every order in the shop. The visitor report counts orders placed on the website by shoppers who have not blocked tracking, so it is a little lower — and it never includes DM orders typed in by you (7.4). Analytics is the true count; use the visitor report to see **where** shoppers come from and **what** they look at.

15. Glossary

Word	Plain meaning
Option	A way a garment varies: Size, Colour.
Variant	One combination a shopper buys — Black / M. Has its own stock.
SKU	A product code for one variant (optional).
Type	men , women or unisex — which aisle the product shows in.
Category	A tile on /men and /women (Sweaters, Polos).
Tag	A label on a product (featured , new-arrival).
Price list	A set of different prices — a sale, or prices for a customer group.
Promotion	A discount code or an automatic offer.
Campaign	Dates and a budget shared by promotions.
Customer group	Customers collected for a special price or offer.
Reserved	Stock promised to orders not yet fulfilled.
Fulfill	Pick and pack an order; stock goes down.
Capture	Record that the money came in (Cash on Delivery).
Draft order	An order you type in yourself (DM orders).
Sales channel	Where products are sold — here only the website.
Trusted admin	An Admin allowed to see the audit log and make reset links.
Publish changes	The button that sends price-list changes to the website.
Live Preview	Payload's side-by-side view of the real page, refreshed on Save.
